Systems Benchmarking Samuel Kounev,Klaus-Dieter Lange,Jóakim von Kistowski,2025-03-21 This book serves as both a textbook and handbook on the benchmarking of systems and components used as building blocks of modern information and communication technology applications It provides theoretical and practical foundations as well as an in depth exploration of modern benchmarks and benchmark development The book is divided into two parts foundations and applications The first part introduces the foundations of benchmarking as a discipline covering the three fundamental elements of each benchmarking approach metrics workloads and measurement methodology The second part focuses on different application areas presenting contributions in specific fields of benchmark development These contributions address the unique challenges that arise in the conception and development of benchmarks for specific

systems or subsystems and they demonstrate how the foundations and concepts in the first part of the book are being used in existing benchmarks. Further, the book presents a number of concrete applications and case studies based on input from leading benchmark developers from consortia such as the Standard Performance Evaluation Corporation (SPEC) and the Transaction Processing Performance Council (TPC). Besides a number of updates in almost all chapters for this new edition, three chapters are added in Part II of the book: 1. Machine Learning and Artificial Intelligence to cater the growing need to evaluate and benchmark ML and AI systems; 2. Scalability of Networks and Systems focusing on novel metrics and techniques to evaluate scalability; and 3. PC Workstation Graphics and Network Benchmarks covering popular benchmarks like SYSmark, PCMark, Phoronix Test Suite, 3DMark, the Blender benchmark, and end-to-end network performance tools. Providing both practical and theoretical foundations as well as a detailed discussion of modern benchmarks and their development, the book is intended as a handbook for professionals and researchers working in areas related to benchmarking. It offers an up-to-date point of reference for existing work as well as latest results, research challenges, and future research directions. It also can be used as a textbook for graduate and postgraduate students studying any of the many subjects related to benchmarking. While readers are assumed to be familiar with the principles and practices of computer science as well as software and systems engineering, no specific expertise in any subfield of these disciplines is required.

Handbook of Natural Language Processing and Machine Translation Joseph Olive, Caitlin Christianson, John McCary, 2011-03-02 This comprehensive handbook written by leading experts in the field details the groundbreaking research conducted under the breakthrough GALE program The Global Autonomous Language Exploitation within the Defense Advanced Research Projects Agency DARPA while placing it in the context of previous research in the fields of natural language and signal processing artificial intelligence and machine translation The most fundamental contrast between GALE and its predecessor programs was its holistic integration of previously separate or sequential processes In earlier language research programs each of the individual processes was performed separately and sequentially speech recognition language recognition transcription translation and content summarization The GALE program employed a distinctly new approach by executing these processes simultaneously Speech and language recognition algorithms now aid translation and transcription processes and vice versa This combination of previously distinct processes has produced significant research and performance breakthroughs and has fundamentally changed the natural language processing and machine translation fields This comprehensive handbook provides an exhaustive exploration into these latest technologies in natural language speech and signal processing and machine translation providing researchers practitioners and students with an authoritative reference on the topic
