Artificial Neural Nets and Genetic Algorithms David W. Pearson, Nigel C. Steele, Rudolf F. Albrecht, 2012-12-06 Artificial neural networks and genetic algorithms both are areas of research which have their origins in mathematical models constructed in order to gain understanding of important natural processes By focussing on the process models rather than the processes themselves significant new computational techniques have evolved which have found application in a large number of diverse fields This diversity is reflected in the topics which are subjects of the contributions to this volume There are contributions reporting successful applications of the technology to the solution of industrial commercial problems This may well reflect the maturity of the technology notably in the sense that real users of modelling prediction techniques are prepared to accept neural networks as a valid paradigm Theoretical issues also receive attention notably in connection with the radial basis function neural network Contributions in the field of genetic algorithms reflect the wide range of current applications including for example portfolio selection filter design frequency assignment tuning of nonlinear PID controllers These techniques are also used extensively for combinatorial optimisation problems

Speech Processing in Embedded Systems Priyabrata Sinha, 2009-12-01 Speech Processing has rapidly emerged as one of the most widespread and well understood application areas in the broader discipline of Digital Signal Processing Besides the telecommunications applications that have hitherto been the largest users of speech processing algorithms several non traditional embedded processor applications are enhancing their functionality and user interfaces by utilizing various aspects of speech processing Speech Processing in

Embedded Systems describes several areas of speech processing and the various algorithms and industry standards that address each of these areas. The topics covered include different types of Speech Compression, Echo Cancellation, Noise Suppression, Speech Recognition, and Speech Synthesis. In addition, this book explores various issues and considerations related to efficient implementation of these algorithms on real-time embedded systems, including the role played by processor, CPU, and peripheral functionality.
