Process Dynamics and Control Dale E. Seborg, Thomas F. Edgar, Duncan A. Mellichamp, Francis J. Doyle, III, 2016-09-13
The new 4th edition of Seborg's *Process Dynamics and Control* provides full topical coverage for process control courses in the chemical engineering curriculum emphasizing how process control and its related fields of process modeling and optimization are essential to the development of high value products A principal objective of this new edition is to describe modern techniques for control processes with an emphasis on complex systems necessary to the development design and operation of modern processing plants Control process instructors can cover the basic material while also having the flexibility to include advanced topics

Digital Experiments Emphasizing Troubleshooting Jerry V. Cox, 1990

Designing Controls for the Process Industries Wayne Seames, 2023-11-30 Offering a modern process oriented approach emphasizing process control scheme development instead of extended coverage of Laplace space descriptions of process dynamics *Designing Controls for the Process Industries* focuses on aspects that are most important for contemporary practical process engineering and reflects the industry's use of digital distributed control based systems The second edition now features 60 tutorial videos demonstrating solutions to most of the example problems Instead of starting with the controller the book starts with the process and moves on to how basic regulatory control schemes can be designed to achieve the process objectives while maintaining stable operations In addition to continuous control concepts process and control system dynamics are embedded into the text with each new concept presented The book also includes sections on batch and semi batch processes and safety automation within each concept area It discusses the four most common control techniques control loop feedback feedforward ratio and cascade and discusses application of these techniques for process control schemes for the most common types of unit operations It also discusses more advanced and less commonly used regulatory control options such as override allocation and split range controllers includes an introduction to higher level automation functions and provides guidance for ways to increase the overall safety stability and efficiency for many process applications It introduces the theory behind the most common types of controllers used in the process industries and provides various additional plant automation related subjects The new edition also includes new homework problems and examples including multiple choice questions for flipped classes information about statistical process control and a new case study that documents the development of regulatory control schemes for an entire process area Aimed at chemical engineering students in process control courses as well as practicing process and control engineers this textbook offers an alternative to traditional texts and offers a practical hands on approach to design of process controls PowerPoint lecture slides multiple choice quiz questions for each chapter and a solutions manual are available to qualifying instructors Tutorial style videos for most of the text examples are available for all readers to download
