Modern Geotechnical Design Codes of Practice Patrick Arnold, Gordon A. Fenton, Michael A. Hicks, Timo Schweckendiek, Brian Simpson, 2013
The ground is one of the most highly variable of engineering materials It is therefore not surprising that geotechnical designs depend on local site conditions and local engineering experience Engineering practices relating to investigation and design methods site understanding and to safety levels acceptable to society will therefore vary between different regions The challenge in

geotechnical engineering is to make use of worldwide geotechnical experience established over many years to aid in the development and harmonization of geotechnical design codes Given the significant uncertainties involved empiricism and engineering judgment will undoubtedly always be an essential element of geotechnical design However rigorous and scientific approaches based on probability theory are finding increased attention in the calibration of modern geotechnical codes of practice and these codes can and should be used to aid fundamental engineering judgment Containing contributions on Code Implementation Code Application and Code Development this book provides a single resource that code developers practitioners and researchers can use to understand the different choices made by national code developers around the world Furthermore the book highlights some of the key challenges faced worldwide concerning the ongoing process of harmonizing geotechnical design code specifications

Channels and Channel Control Structures K. V. H.

Smith,2013-11-21 The development of water resources has proceeded at an amazing speed around the world in the last few decades The hydraulic engineer has played his part in constructing much larger artificial channels than ever before larger and more sophisticated control structures and systems of irrigation drainage and water supply channels in which the flow by its nature is complex and unsteady requiring computer based techniques at both the design and operation stage It seemed appropriate to look briefly at some of the developments in hydraulic design resulting from this situation Hence the idea of the Conference was formed The Proceedings of the Conference show that hydraulic engineers have been able to acquire a very substantial base of design capability from the experience of the period referred to The most outstanding development to have occurred is in the combination of physical and mathematical modelling which in hydraulic engineering has followed a parallel path to that in other branches of engineering science The Proceedings of this Conference will give to the reader an awareness of the current state of hydraulic design in open channel flow and open channel control structures K V H Smith Editor 1 CONTROL AND DIVERSION STRUCTURES 1 3 FACTORS AFFECTING BRINK DEPTH IN RECTANGULAR OVERFALLS G C Christodoulou G C Noutsopoulos and S A Andreou Dept of Civil Engineering National Technical Univ of Athens Greece
