Transylvanian Dinosaurs David B. Weishampel, Coralia-Maria Jianu, 2011-09-22 The history and science of a cluster of dinosaurs found in the Hungarian region

and the story of the aristocrat who discovered them At the end of the time of the dinosaurs Transylvania was an island in what was to become southeastern Europe The island s limited resources affected the size and life histories of its animals resulting in a local dwarfism For example sauropods found on the island measured only six meters long while their cousins elsewhere grew up to five times larger Here David B Weishampel and Coralia Maria Jianu present unique evolutionary interpretations of this phenomenon The authors bring together the latest information on the fauna flora geology and paleogeography of the region casting these ancient reptiles in their phylogenetic paleoecological and evolutionary contexts What the authors find is that Transylvanian dinosaurs experienced a range of unpredictable successes as they evolved Woven throughout the detailed history and science of these diminutive dinosaurs is the fascinating story of the man who first discovered them the mysterious twentieth century paleontologist Franz Baron Nopcsa whose name is synonymous with Transylvanian dinosaurs Hailed by some as the father of paleobiology it was Nopcsa alone who understood the importance of the dinosaur discoveries in Transylvania their story cannot be told without recounting his Transylvanian Dinosaurs strikes an engaging balance between biography and scientific treatise and is sure to capture the imagination of professional paleontologists and amateur dinophiles alike It is rare to find a book on dinosaurs so literate well written and full of insight and synthesis particularly when the dinosaurs are so unusual The authors lay them out for us situate them beautifully in time space and cultural history and then reassemble them and their world using all the tools of modern science The result is a tour de force Kevin Padian University of California Museum of Paleontology A fine example of something I always try but rarely succeed to articulate to colleagues in paleontology evolutionary biology and geology who don t work on dinosaurs Dinosaurs within the context of their ecosystems and paleogeography can tell us many neat things about how evolution works over long time scales Stephen Brusatte Priscum **Dinosaurs by the Numbers** Steve Jenkins,2019 Uses infographics to explore dinosaurs including what they looked like how fast they could run and if any of them are alive today **THE EMERGENCE AND NATURE OF HUMAN HISTORY Volume One** Joseph Miller,2012-07-29 This book attempts to define the issues that face us in trying to understand the often overwhelming complexity of the human experience It is intellectually challenging broad in its scope richly detailed and densely argued It is the first in a projected series of five volumes in which the author will seek to touch on every aspect of human historical reality and all the multitudinous variables that have shaped it **The Story of the Dinosaurs in 25 Discoveries** Donald R. Prothero,2019-07-16 Today any kid can rattle off the names of dozens of dinosaurs But it took centuries of scientific effort and a lot of luck to discover and establish the diversity of dinosaur species we now know How did we learn that Triceratops had three horns Why don t many paleontologists consider Brontosaurus a valid species What convinced scientists that modern birds are relatives of ancient Velociraptor In *The Story of the Dinosaurs in 25 Discoveries* Donald R Prothero tells the fascinating stories behind the most important fossil finds and the intrepid researchers who unearthed them In twenty five vivid vignettes he weaves together dramatic tales of dinosaur

discoveries with what modern science now knows about the species to which they belong Prothero takes us from eighteenth century sightings of colossal bones taken for biblical giants through recent discoveries of enormous predators even larger than Tyrannosaurus He recounts the escapades of the larger than life personalities who made modern paleontology including scientific rivalries like the nineteenth century Bone Wars Prothero also details how to draw the boundaries between species and explores debates such as whether dinosaurs had feathers explaining the findings that settled them or keep them going Throughout he offers a clear and rigorous look at what paleontologists consider sound interpretation of evidence An essential read for any dinosaur lover this book teaches us to see an ancient world ruled by giant majestic creatures anew

Genesis Revealed Peter Waller, The lines have been drawn On one side are young earth creationists who assert that God created the universe in six days and based on calculations derived from the Bible that the earth is six thousand years old On the other side are secular scientists who claim the universe has existed for over thirteen billion years the earth for 4.5 billion Scientists claim that no miracles were necessary to form the universe and that everything is explained by natural causes However young earth creationists point to verses at the beginning of the Bible and the beginning of the book of John that clearly claim that God created the universe In the beginning God created the heavens and the earth The earth was formless and void and darkness was over the surface of the deep and the Spirit of God was moving over the surface of the waters Genesis 1:1-2 In the beginning was the Word and the Word was with God and the Word was God He was in the beginning with God All things were made by him and without him was not anything made that was made John 1:1-3 But what if there is no contradiction between scientific data and the Bible Arnold Guyot was a nineteenth century geologist and geographer at Princeton University In addition to his numerous scientific accomplishments he developed the day age interpretation of Genesis 1 in which the days of creation represent geologic ages When we view the Bible through this lens we find that modern science has not only failed to refute the miracles of Genesis but has in fact provided abundant evidence for their veracity Genesis Revealed A Scientific Examination of the Creation Story takes readers down the twin paths of science and theology to show that they lead us to the same destination Citing a multitude of discoveries in astronomy and geology Dr Peter Waller makes a compelling case for Guyot's interpretation and for the miracles described in Genesis 1:1-25
