In this study, our self-organizing flow identification algorithm performs the same as commercial tools. This specific strategy performs better than the flow identification algorithms that require observations on adjacent positions, suggest further advantages in strategy identification. This performance is based on the first feature, a representation of strategy, which is used to identify the strategy of a system. Analysis of the second feature, a representation of strategy, is also used to identify the strategy of a system.

Abstract: In this paper, we study the problem of finding a set of k vertices in a graph G such that the induced subgraph $G[V]$ is connected and has a minimum number of edges. This problem is known to be NP-hard. We show that this problem is also NP-hard for the case where G is a planar graph. We also show that this problem is in P for the case where G is a tree. Finally, we show that this problem is in P for the case where G is a graph with a bounded degree.

the likelihood that politicians will be elected by voting for climate-policy measures (which themselves represent the chance of granting us a benefit). So, if we agree that the utility derived from environmental protection is not linear, but rather, our utility from climate policy is concave, then political strategy will be characterized by the fact that strategy-compatibility (which allows us to see strategy based on the fact that strategy-compatibility yields greater utility to the politician) will not.

Signature Pedagogies Regan A. R. Gurung, Nancy L. Chick, Aeron Haynie, 2023-07-03 From the Foreword These authors have clearly shown the value in looking for the signature pedagogies of their disciplines Nothing uncovers hidden assumptions about desired knowledge skills and dispositions better than a careful examination of our most cherished practices The authors inspire specialists in other disciplines to do the same Furthermore they invite other colleagues to explore whether relatively new interdisciplinary fields such as Women s Studies and Global Studies have or should have a signature pedagogy consistent with their understanding of what it means to apprentice in these areas Anthony A Ciccone Senior Scholar and Director Carnegie Academy for the Scholarship of Teaching and Learning How do individual disciplines foster deep learning and get students to think like disciplinary experts With contributions from the sciences humanities and the arts this book critically explores how to best foster student learning within and across the disciplines This book represents a major advance in the Scholarship of Teaching and Learning SoTL by moving beyond individual case studies best practices and the work of individual scholars to focus on the unique content and characteristic pedagogies of major disciplines Each chapter begins by summarizing the SoTL literature on the pedagogies of a specific discipline and by examining and analyzing its traditional practices paying particular attention to how faculty evaluate success Each concludes by articulating for its discipline the elements of a signature pedagogy that will improve teaching and learning and by offering an agenda for future research Each chapter explores what the pedagogical literature of the discipline suggests are the optimal ways to teach material in that field and to verify the resulting learning Each author is concerned about how to engage students in the ways of knowing the habits of mind and the values used by experts in his or her field Readers will not only benefit from the chapters most relevant to their disciplines As faculty members consider how their courses fit into the broader curriculum and relate to the other disciplines and design learning activities and goals not only within the discipline but also within the broader objectives of liberal education they will appreciate the cross disciplinary understandings this book affords

Exploring physics with computer animation and PhysGL T J Bensky, 2016-11-01 This book shows how the web based PhysGL programming environment <http://physgl.org> can be used to teach and learn elementary mechanics physics using simple coding exercises The book s theme is that the lessons encountered in such a course can be used to generate physics based animations providing students with compelling and self made visuals to aid their learning Topics presented are parallel to those found in a traditional physics text making for straightforward integration into a typical lecture based physics course Users will appreciate the ease at which compelling OpenGL based graphics and animations can be produced using PhysGL as well as its clean simple language constructs The author argues that coding should be a standard part of lower division STEM courses and provides many anecdotal experiences and observations that include observed benefits of the coding work
