**Development of Modality in First Language Acquisition** Ursula Stephany, Ayhan Aksu-Koç, 2021-03-08 This book deals with the development of modality from a crosslinguistic perspective and is closely related to two earlier volumes on the development of verb and nominal inflection in first language acquisition SOLA 21 and 30 both methodologically and theoretically Each of the fourteen contributions studies the early development of the form and function of expressions of deontic and dynamic agent oriented modality or epistemic and evidential propositional modality in one of fourteen languages belonging to different morphological types and language families seven Indo European and seven non Indo European The analyses are mainly based on longitudinal observations of children in their 2nd and 3rd years of life in conversational interaction with their caregivers mostly the mothers Main issues addressed are the development of directives and modulations of information in terms of certainty and evidentiality also taking into account children's developing social pragmatic and cognitive skills One of the main findings is that agent oriented and propositional modality may develop in parallel depending on the typological characteristics of the language acquired The decisive factor is whether notions of propositional modality are grammaticized and obligatorily expressed in the language The findings are interpreted within non nativist theoretical frameworks Usage based theories Natural Morphology

**Sources of Variation in First Language Acquisition** Maya Hickmann, Edy Veneziano, Harriet Jisa, 2018-02-22 Developmental research has long focused on regularities in language acquisition minimizing factors that might be responsible for variation Although researchers are now increasingly concerned with one or another of these factors this volume brings together research on three different sources of variation language specific properties the nature of the input to children across contexts and several aspects of the learners themselves Chapters explore these sources of variation within an interdisciplinary and comparative approach allying theories and methodologies stemming from linguistics psycholinguistics developmental psychology and neuroscience The comparative perspective involves different languages contexts of use types of learners first second language acquisition monolingual bilingual learners autism language impairment as well as vocal and visuo gestural communicative modalities co verbal gestures sign language acquisition The volume points to the need to enhance interdisciplinary research using complementary methodologies to further examine sources of variation and to integrate variation into a more general developmental theory

Pragmatic Development in First Language Acquisition Danielle Matthews, 2014-06-15 Pragmatic development is increasingly seen as the foundation stone of language acquisition more generally From very early on children demonstrate a strong desire to understand and be understood that motivates the acquisition of lexicon and grammar and enables ever more effective communication In the 35 years since the first edited volume on the topic a flourishing literature

has reported on the broad set of skills that can be called pragmatic This volume aims to bring that literature together in a digestible format It provides a series of succinct review chapters on 19 key topics ranging from preverbal skills right up to irony and argumentative discourse Each chapter equips the reader with an overview of current theories key empirical findings and questions for new research This valuable resource will be of interest to scholars of psychology linguistics speech therapy and cognitive science

### **Usage-Based Approaches to Language Acquisition and Language Teaching**

Jacqueline Evers-Vermeul, Elena Tribushinina, 2017-03-06 Although usage based approaches have been successfully applied to the study of both first and second language acquisition to monolingual and bilingual development and to naturalistic and instructed settings it is not common to consider these different kinds of acquisition in tandem The present volume takes an integrative approach and shows that usage based theories provide a much needed unified framework for the study of first second and foreign language acquisition in monolingual and bilingual contexts The contributions target the acquisition of a wide range of linguistic phenomena and critically assess the applicability and explanatory power of the usage based paradigm The book also systematically examines a range of cognitive and linguistic factors involved in the process of language development and relates relevant findings to language teaching Finally this volume contributes to the assessment and refinement of empirical methods currently employed in usage based acquisition research This book is of interest to scholars of language acquisition language pedagogy developmental psychology as well as Cognitive Linguistics and Construction Grammar

### **Language Mixing in Infant Bilingualism**

Elizabeth Lanza, 2004 This book addresses the issue of language contact in the context of child language acquisition Elizabeth Lanza examines in detail the simultaneous acquisition of Norwegian and English by two first born children in families living in Norway in which the mother is American and the father Norwegian She connects psycholinguistic arguments with sociolinguistic evidence adding a much needed dimension of real language use in context to the psycholinguistic studies which have dominated the field She draws upon evidence from other studies to support her claims concerning language dominance and the child's differentiation between the two languages in relation to the situation interlocutor and the communicative demands of the context She also addresses the question of whether or not the language mixing of infant bilingualism is conceptually different from the codeswitching of older bilinguals thus helping to bridge the gap between these two fields of study
