**Cardiac Mapping** Mohammad Shenasa, Gerhard Hindricks, Martin Borggreffe, Gunter Breithardt, Mark E.

Josephson, 2012-10-17 Cardiac Mapping is the cardiac electrophysiologist's GPS. It will guide you to new places in the heart and help you find the old places more easily, a valuable addition to your bookshelf. Douglas P Zipes from the Foreword: Over the course of three previous editions, this book has become the acknowledged gold standard reference on the electro-anatomical mapping of the heart. This new edition features greatly expanded coverage; the number of chapters has doubled to 80, with 40 new chapters on leading edge science, new clinical applications, and future frontiers, authored by a who's who of global electrophysiology. This unique text offers truly comprehensive coverage of all areas of cardiac mapping, from core scientific principals to methodological and technical considerations, to the latest data that you can put to work caring for patients. In addition, the all new 4th edition adds essential content on Mapping in experimental models of arrhythmias, Mapping supraventricular and ventricular tachyarrhythmias, New catheter based techniques. Also featuring a companion website with video clips illustrating essential techniques described in the text. The only state of the art stand alone text on this dynamic subject. Cardiac Mapping is an essential resource for basic scientists, clinical electrophysiologists, cardiologists, and all physicians who care for patients with cardiac arrhythmias. Structural Heart Disease Interventions John D.

Carroll, John G. Webb, 2012-11-05 Structural heart disease interventions are a diverse group of novel treatments that have evolved from a small number of procedures to an impressive array of new approaches to diseases that have been traditionally managed by surgery and medical therapy. This book has been prepared for use by physicians and non-physicians who have an interest in SHD interventions and desire a practical, comprehensive, and clinical summary of established and emerging percutaneous interventions. The chapters are authored by recognized experts from around the world. There are five major sections including: 1. Core Knowledge in SHD Intervention, 2. Specialized Skills for the Interventionalist, 3. Closure of Congenital and Acquired Defects in Adults, 4. Transcatheter Therapy for Valvular Disease, 5. Specialized Procedures. Features include: Extensive images to present anatomical complexities and diversity, including some interactive 3D graphics. Presentation of transcatheter mitral valve repair. Chapter on how to set up a SHD program. Catheter-Based Cardiovascular Interventions Peter Lanzer, 2012-08-01 Operator skills and, in particular, decision making and strategic skills are the most critical factors for the outcome of catheter-based cardiovascular interventions. Currently, such skills are commonly developed by the empirical trial and error method only. In this textbook, for the first time, an explicit teaching, training, and learning approach is set out that will enable interventional operators, whether cardiologists, vascular surgeons, vascular specialists, or radiologists, to learn about and to develop the cognitive skills required in order to achieve consistent expert-level catheter-based interventions. It is anticipated that adoption of this approach will allow catheter-based interventions to become a domain of excellence, with rapid transfer of knowledge, steep learning curves, and highly efficient

acquisition of complex skills by individual operators all of which are essential to meet successfully the challenges of modern cardiovascular care

*Textbook of Catheter-Based Cardiovascular Interventions* Peter Lanzer,2018-04-30 This book is a fully updated and revised second edition of a highly successful text in which a new concept of knowledge mining based on explication and transfer of interventional knowledge of experts has been implemented The dedicated training program that is set out will serve the needs of all interventional operators whether cardiologists vascular surgeons vascular specialists or radiologists enabling them to achieve a consistent expert level across the entire broad spectrum of catheter based interventions Operator skills and in particular decision making and strategic skills are the most critical factors for the outcome of catheter based cardiovascular interventions Currently such skills are commonly developed by the empirical trial and error method only The explicit teaching training and learning approach adopted in this book permits the rapid transfer of interventional knowledge and enables individual operators to negotiate steep learning curves and acquire complex skills in a highly efficient manner It will thereby offer invaluable assistance in meeting successfully the challenges of modern cardiovascular care
