**FOUNDATION ENGINEERING** P. C. VARGHESE, 2005-01-01 Foundation Engineering is of prime importance to undergraduate and postgraduate students of civil engineering as well as to practising engineers. For there is no construction be it buildings, government, commercial and residential bridges, highways or dams that does not draw from the principles and application of this subject. Unlike many textbooks on Geotechnical Engineering that deal with both Soil Mechanics and Foundation Engineering, this text gives an exclusive treatment and an in-depth analysis of Foundation Engineering. What distinguishes the text is that it not merely equips the students with the necessary knowledge for the course and examination but provides a solid foundation for further practice in their profession later. In addition, as the book is based on the Codes prescribed by the Bureau of Indian Standards, students of Indian universities will find it particularly useful. The author is specialized in both Soil Mechanics and Structural Engineering; he studied Soil Mechanics under the guidance of Prof Terzaghi and Prof Casagrande of Harvard University, the pioneers of the subject. Similarly, he studied Structural Engineering under Prof A L L Baker of Imperial College London, the pioneer of Limit State Design. These specializations coupled with over 50 years of teaching experience of the author make this text authoritative and exhaustive. Intended as a text for undergraduate Civil Engineering and postgraduate Geotechnical Engineering and Structural Engineering students, the book would also be found highly useful to practising engineers and young academics teaching the course.

**Design of Reinforced Concrete Foundations** P. C. Varghese, 2009-12 It explains step by step procedure for the design of each type of foundation with the help of a large number of worked out examples. U., IBRAHIM AZMI, JANARDHANA MAGANTI, VIJAYANAND M, 2016-01-18 The book begins with a brief introduction helping the reader to understand the fundamentals of stress concept and prestressed concrete systems. The discussion then follows to explain the computation of different losses and estimation of ultimate flexural and shear strength. Important code provisions viz IS1343:2012, Eurocode EN2 and BS EN 1:2004 are also highlighted in this text. For clear understanding of the materials, the text is supported by a good number of figures and tables. Besides covering the important topics on design and analysis of anchorage zone stresses and analysis of continuous beam, the book also discusses composite construction and circular prestressing. The book is designed as a textbook for the senior level undergraduate and postgraduate students of civil engineering and construction technology.
