

Churn in the Telecommunications Industry

"Churn rate (sometimes called attrition rate), in its broadest sense, is a measure of the number of individuals or items moving out of a collective group over a specific period of time" = Customer Leaving

Wikipedia

Churn is a significant problem that costs telecommunications companies billions of dollars through lost revenue. Now that the market is more mature, the only way for a company to grow is to take their competitors customers. This issue

combined with the greater choice that consumers have gained means that any adverse touch point with a consumer can result in a lost customer.

Typical churn rates for telecom firms are between 2% and 2.5% per month. The industry has 400 million customers so this means a loss of approximately 8 million customers or a loss of \$471 million per month or \$5.7 billion per year in revenue.

In addition, overall average revenue per unit (ARPU) is declining by 2.7% to 8.7% per year using traditional marketing activities.
