Learning Goals

- Explore basic electricity relationships.
- Explain basic electricity relationships in series and parallel circuits.
- Use an ammeter and voltmeter to take readings in circuits.
- Provide reasoning to explain the measurements and relationships in circuits.

Prediction Questions

Consider the pictures of each of these circuits, then answer the questions below.

Series Circuit

Parallel Circuit

Complex Circuit

1. From the circuits above, predict which bulb (or bulbs) will be the brightest. Why do you think that?

Write your answer here:

2. Current is the flow of charge (measured in coulombs/sec = amps) in a circuit. Describe how you think current will flow in the different types of circuits above.

Develop your understanding:

3. Explore the [Intro](#) screen of Circuit Construction Kit DC
 - a. Build a circuit that shows how to make a light bulb light up.
 - b. Figure out how to measure current and voltage.
 - c. Insert an image of your circuit with the current and voltage measured.
4. Imagine you're an engineer making a string of battery powered holiday lights. If a bulb burns out current cannot flow through that bulb any longer like if the wire at the bulb has been cut. Figure out how to hook up 2 light bulbs and a battery so that when one bulb burns out or is disconnected the other stays lit.
 - a. Insert images to illustrate that your circuit works as expected.
 - b. Explain why you think it works.

Write your answer here:

5. Imagine that you want to make sure the battery for your string of lights will last as long as possible. A battery will last longer if it powers a circuit with low current. How could you hook up a battery and 2 light

National Aeronautics and Space Administration, Symposium Record ,1993 *Recent Trends and Advances in Artificial Intelligence* Fausto P. Garcia,Akhtar Jamil,Alaa Ali Hameed,Alessandro Ortis,Isaac Segovia Ramirez,2024-11-21 This book presents a curated selection of papers from the International Conference on Advanced Engineering Technology and Applications ICAETA24 hosted by the University of Catania Italy in March 2024 The conference is co organized by Istinye University Turkey The book delves into the forefront of technological advancements spotlighting the latest trends and applications of artificial intelligence across diverse domains and addressing real world challenges with transformative solutions Readers will gain insights into state of the art models and methodologies particularly focusing on their applications on benchmark datasets The discussions and presentations within this volume are organized around four pivotal tracks Artificial Intelligence and Machine Learning Big Data and Cloud Computing Internet of Things and Sensor Technology and Applications of Artificial Intelligence Each track offers a deep dive into its respective domain exploring the profound impact of technological innovations on various industries and sectors **Brain-powered Science** Thomas O'Brien,2010 How can a long metal needle pass through a balloon without popping it How can water flow at very different rates through two identical funnels How can a stick placed on a table under several sheets of newspaper and extended over the edge of a table snap when quickly struck without lifting or tearing the paper Author Thomas O Brien takes these and 30 more science inquiry activities to a higher level in this book for educators who love to surprise and challenge their students with unanticipated results Using experiments based on the science of a discrepant event an experiment or demonstration in which the outcome is not what students expect O Brien shows how learners can be motivated to reconsider their preconceived notions and think more closely about what has actually occurred and the underlying scientific explanations What makes this volume more valuable than a mere activity book is the addition of a science education component to the extensive science content found in each activity Each discrepant

event is shown to be analogous to a pedagogical principle Speaking directly to teachers O'Brien writes Your participation as teacher as learner experimenter rather than simply passive reader in these minds on activities will lead you to question and help you to revise your implicit assumptions about the nature of science teaching and learning At the same time you will develop expertise with activities that you can use with your own students The dual purpose activities thus allow you to unlock two doors with one key the doors to your own learning and to your students learning The detailed analogies between the activities and science learning make the book an ideal resource for middle and high school teachers science teacher educators and their preservice students and professional development specialists alike This thorough and thought provoking text includes more than 200 up to date internet resources as well as extensions to each of the physical science biology and chemistry activities bringing the total number of inquiry activities to nearly 120 Most important the author reminds teachers that the study of science is full of surprises and should be both meaningful and fun for students
