Therefore the questions in this book require the same level of analysis as the question on the CCNA CCENT ICND1 exams. Varieties of internetworking designing and troubleshooting scenarios are described in this book. While these scenarios prepare you for the exam, you will obtain strong experiences on CISCO switches, CISCO routers, CISCO internetworking and the associated protocols and technologies. The three Simulated CISCO exams make you more confident in the real CISCO exam. CCENT is the essential certification for the CISCO internetworking routing and switching track. Understanding the CCENT topics and passing this exam successfully are crucial for those who want to be an Internetworking professional and is an easy mission just follow this book. The current track of the CCNA routing and switching contains two exams and two certifications: the CCENT ICND1 exam 640 822 and the ICND2 exam 640 816. However, it is possible to obtain the CCNA exam 640 802 by one exam and one certification. Now CCENT and CCNA are the most popular entry level networking and internetworking certification programs. The CCENT certification proves that you have a firm foundation in the networking and internetworking field and it proves that you have a solid understanding of IP protocol, IP routing, switching and many of CISCO device configurations. The book provides in depth coverage of all official CCNA CCENT exam objectives and uses 2800 router, 1841 router, catalyst 2960 switch and many other CISCO devices to clarify the required concepts. It also provides an up to date information for the newest catalyst 2960 S switch and 802 11n wireless technology. It provides objective by objective coverage of all the material the student needs to know for the exam, signaling out critical information, outlining necessary procedures and identifying the exam essentials. The book is composed of ten chapters. Each chapter treats each internetworking entity with clear, simple, easy to follow sections, text boxes and numerous conceptual figures. The book contains more than 313 Figures, 33 Exhibits, 150 Tables and hundreds of CISCO Switches and Routers Configurations. At the end of each chapter, a number of learning questions, exam engine with flash cards and a list of the commands which are used in that chapter are given. To make the reader student more familiar with the CISCO exam which is not requiring explaining the answer, some of the answers are not provided with explanations. However, explanations for these answers can be obtained easily from their questions. This will preserve the reader time by eliminating all the repeated information and it will not waste his/her time by extra statements. To encourage the reader to stop and think as well as to test his knowledge, the answers are not given directly after the learning questions; instead, the answers are listed in Appendix A with complementary discussions. This book uses mainly the passive voice way of writing to give the reader strong straightforward information without confusing the reader by extra not required statements. This way of writing is also used by CISCO for devices configurations and by several computer technical books and operating systems; hence the reader will be more familiar with CISCO devices configurations while he/she reads this book. The 2200 questions are distributed across the book as shown below:

Chapter 1	Internetworking Essentials	312
Chapter 2	Internetworking IP Protocol and IP Addressing	308
Chapter 3	Subnetting IP Network and VLSMs	85
