The history of civil engineering starts from the 12th century with the development of the weapon and military constructions. The military engineers constructed machines which helped in the war.

The first mentioning about the civil engineers appeared in Holland in the 16th century. The process of civil engineering is divided into several major stages: the initial stage of projecting, investment, constructing, exploitation and utilization. Civil engineering is an extremely broad issue and it touches upon numerous branches of the human life. For example, it is connected with the construction of the industrial objects, private houses (urban engineering), construction of roads, transportation (the public transport and its lines), water resource engineering (pipelines which are aimed to supply people with water), earthquake engineering (the means which are helpful in the prevention and reduction of the result of an earthquake), etc. Civil engineering is an extremely varied branch of engineering and it can be called the primary factor which effects the quality of life in the urban areas.

Civil engineering is quite a useful topic for the research and the student is able to observe the issue deeper and suggest his own concepts and strategies of the development and improvement of the certain branches of civil engineering. The student is obliged to dwell on the explanation of the purpose of the research, presentation of the problems which disturb him, the ways of the solution of the problems and the selection of the methods of the research. In addition, the student is supposed to share the expectations concerning the topic of civil engineering and the evaluation of the urgency of the issue.

The aim of the student is to prove that the chosen topic on civil engineering is worth attention. The Internet and a free research proposal civil engineering example can help the young person with the professional composition of the text. Relying on the intensive help of a free research proposal sample civil engineering the student will manage to solve the problem of formatting, the right research of the problem and master the convincing tone of writing.

Civil Engineering Jeffrey S. Russell, 2003-01-01 This report contains 27 papers that serve as a testament to the state of the art of civil engineering at the outset of the 21st century as well as to commemorate the ASCE's Sesquicentennial. Written by the leading practitioners, educators, and researchers of civil engineering, each of these peer-reviewed papers explores a particular aspect of civil engineering knowledge and practice. Each paper explores the development of a particular civil engineering specialty, including milestones and future barriers, constraints, and opportunities. The papers celebrate the history, heritage, and accomplishments of the profession in all facets of practice, including construction, facilities, special structures, engineering mechanics, surveying, and mapping, irrigation, and water quality, forensics, computing, materials, geotechnical engineering, hydraulic engineering, and transportation engineering. While each paper is unique, collectively they provide a snapshot of the profession while offering thoughtful predictions of likely developments in the years to come. Together, the papers illuminate the mounting complexity facing civil engineering, stemming from rapid growth in scientific knowledge, technological development, and human populations, especially in the last 50 years. An overarching theme is the need for systems-level approaches and consideration from undergraduate education through advanced engineering materials, processes, technologies, and design methods and tools. These papers speak to the need for civil engineers of all specialties to recognize and embrace the growing interconnectedness of the global infrastructure economy, society, and the need to work for more sustainable, life-cycle-oriented solutions. While embracing the past and the present, the papers collected here clearly have an eye on the future needs of ASCE and the civil engineering profession.

Special Report - Highway Research Board National Research Council (U.S.). Highway Research Board, **Bulletin**, 1979 **The Role of Engineers in the Demand Responsive Approach** Annette Bos, 2001 The demand responsive approach (DRA) is advocated both internationally and in South Africa as the approach to ensure sustainable water services because communities are fully engaged in the project process. Although DRA is widely discussed, it has not been adopted in practice. The adoption of DRA can only happen if supply agencies, including technical consultants, are able and willing to take a different role. This study establishes the role of an ideal engineer in the demand responsive approach (DRA) along with the external factors which influence this role. The ideal and existing roles of the engineer and the external factors are compared, and a gap between these has been identified. Conclusions are drawn from this, and the feasibility of adoption of DRA by engineers in South Africa has been analysed. The study is based on interviews with engineers.
