Electronic Projects from the Next Dimension Newton C. Braga,2001 For years paranormal scientists have explored the detection and documentation of spirits auras ESP hypnosis and many more phenomena through electronics Electronic Projects from the Next Dimension provides useful information on building practical circuits and projects and applying the knowledge to unique experiments in the paranormal field The author writes about dozens of inexpensive projects to help electronics hobbyists search for and document their own answers about instrumental transcommunication ITC the electronic voice phenomenon EVP and paranormal experiments involving ESP auras and Kirlian photography Although paranormal studies are considered esoteric Electronic Projects from the Next Dimension teaches the technical skills needed to make devices that can be used in many different kinds of experiments Each section indicates how the circuit can be used in paranormal experiments with suggestions about procedures and how to analyze the results Provides unique projects for believers and skeptics Perfect for any level of electronics experience Learn from these basics projects and design your own applications Pirate Radio and Video Newton C. Braga,2001-01-22 Now that the FCC has changed the laws governing pirate radio and video stations more and more people across the country are starting broadcasts from their homes Of course transmitting equipment is very expensive but now you can build your own transmitters for a fraction of the cost of purchasing By reading about and building the over thirty projects in Pirate Radio and Video you can construct your own station with a minimum investment for maximum learning With projects for UHF VHF AM and FM transmitters this book covers the gamut of popular bands and outputs Not only will you learn how to build your own transmitters but also how to troubleshoot problems test outcomes and even synthesize several types of equipment into a powerful and unique system Written with the electronics hobbyist in mind each project includes basic diagrams complete instructions as well as advice on how to make each project work best for you The list of projects includes over several different FM radio transmitters AM radio transmitters microwave transmitters shortwave transmitters UHF video

Robotics, Mechatronics, and Artificial Intelligence Newton C. Braga, 2002 Accessible to all readers including students of secondary school and amateur technology enthusiasts Robotics Mechatronics and Artificial Intelligence simplifies the process of finding basic circuits to perform simple tasks such as how to control a DC or step motor and provides instruction on creating moving robotic parts such as an eye or an ear Though many companies offer kits for project construction most experimenters want to design and build their own robots and other creatures specific to their needs and goals With this new book by Newton Braga hobbyists and experimenters around the world will be able to decide what skills they want to feature in a project and then choose the right building blocks to create the ideal results In the past few years the technology of robotics mechatronics and artificial intelligence has exploded leaving many people with the desire but not the means to build their own projects The author's fascination with and expertise in the exciting field of robotics is demonstrated by the range of simple to complex project blocks he provides which are designed to benefit both novice and experienced robotics enthusiasts The common components and technology featured in the project blocks are especially beneficial to readers who need practical solutions that can be implemented easily by their own hands without incorporating expensive complicated technology Accessible to technicians and hobbyists with many levels of experience and written to provide inexpensive and creative fun with robotics Appeals to all sorts of technology enthusiasts including those involved with electronics computers home automation mechanics and other areas
