

## Lab # \_\_\_\_\_ Coastal and Continental Temperature Ranges

### Introduction:

Approximately 70 % of Earth's surface is covered by water. The unequal rates of the heating of land and water cause temperature conditions which significantly affect local and world-wide weather patterns. There are large variations in average monthly temperatures among cities located at the same latitude. This suggests that factors besides the angle and duration of insolation affect the rate of heating and cooling of any given location. Air temperature is greatly affected by the location of a place relative to a large body of water.

Problem: How do the temperatures of four cities on the same line of latitude compare?

Purpose: You will graph the average monthly temperatures of coastal and inland continental regions and interpret the range in temperatures.

Vocabulary: - temperature range – average daily temperature – average monthly temperature – - Specific Heat – coastal – continental – insolation – season

### Procedure:

1. Locate the four identified cities on the map of the United States.
  - a. New York, NY
  - b. Bismarck, ND
  - c. Los Angeles, CA
  - d. Phoenix, AZ
