Van Slyke,2016-03-23 The cognitive science of religion is a relatively new academic field in the study of the origins and causes of religious belief and behaviour The focal point of empirical research is the role of basic human cognitive functions in the formation and transmission of religious beliefs However many theologians and religious scholars are concerned that this perspective will reduce and replace explanations based in religious traditions beliefs and values This book attempts to bridge the reductionist divide between science and religion through examination and critique of different aspects of the cognitive science of religion and offers a conciliatory approach that investigates the multiple causal factors involved in the emergence of religion Logical Investigative Methods Robert J. Girod,2014-09-25 This book describes how to use logic reasoning critical thinking and the scientific method to conduct and improve criminal and civil investigations The author discusses how investigators and attorneys can avoid assumptions and false premises and instead make valid deductions inductions and inferences He explains how tools such as interview and interrogation can be used to detect deception and profile unknown individuals and suspects The book is aimed at improving not only the conduct of investigations but also the logical use of cognitive analytical documentation and presentation tools to win cases **Dynamics of Islam in the Modern World** Saeed Zarrabi-Zadeh,Armina Omerika,Thomas K. Kyle,2015-03-06 It is reported that there are as many as 100 billion neurons that make up the human nervous system This system is incredibly complex and yet it is a fundamental part of what makes us who we are Yet there is far more to human beings than biology Many academic disciplines study the human condition and there are many schools of thought within that study We must also appreciate that the study of human nature did not begin in contemporary times History particularly Western Christian history is full of texts that offer detailed explorations of the human condition However no consensus has yet emerged Consensus or not those working towards religious and spiritual formation are tasked with pursuing the transformation of their communities This book is an attempt to provide some of the background to support this ministerial work It seeks not only to offer a fuller understanding of some of the common views of human nature but also insights into how we might utilize this knowledge in our ministries ministries that strive towards the spiritual being and becoming of our world **Impasse** Roy Scranton,2025-08-05 A Next Big Idea Club Must Read for August 2025 We need a new realism in the face of global climate catastrophe Extreme heat fires floods and storms are transforming our planet Yet instead of serious responses from world leaders we get increasing emissions divisive politics and ersatz solutions that offer more of the same more capitalism more complexity more progress The impasse we face is not only political and institutional but cognitive existential and narrative We re incapable of grasping the scale speed and impact of global warming Our brains can t make sense of how radically our world is changing And we

optimistically cling to a civilizational narrative that promises a better tomorrow if we just keep doing what we're doing. It's well past time Roy Scranton argues to free ourselves from our dangerous and dogmatic faith in progress. Such unwarranted optimism will only accelerate our collective disintegration. If we want to have any hope at all for the future, it must be grounded in a recognition of human limits, a view Scranton calls ethical pessimism. Drawing from psychology, philosophy, history, and politics as well as film, literature, and personal experience, Scranton describes the challenges we face in making sense of our predicament, from problems in communication to questions of justice, from the inherent biases in human perception to the difficulties of empirical knowledge. What emerges is a challenging but ultimately hopeful proposition: if we have the courage to accept our limits, we may find a way to embrace our unknowable future.

Reflexively Speaking Anna Mauranen, 2023-03-06

Reflexive language, the capacity of language to speak about itself, is unique to human languages; yet little is known of its use in actual dialogue. Fundamental features of language are manifest in dialogic speech and in *lingua francas*. Both are taken on board in this book, which radically widens our conception of reflexivity in discourse. Reflexivity or metadiscourse is central to successful communication. It is also vital in understanding academic argumentation, essential to academic self-understanding, and at the same time it has wide applications.
