Danielsson, 2020-04-24 This Edited Volume engages with concepts of gender and identity as they are mobilized in research to understand the experiences of learners teachers and practitioners of physics The focus of this collection is on extending theoretical understandings of identity as a means to explore the construction of gender in physics education research This collection expands an understanding of gendered participation in physics from a binary gender deficit model to a more complex understanding of gender as performative and intersectional with other social locations e g race class LGBT status ability etc This volume contributes to a growing scholarship using sociocultural frameworks to understand learning and participation in physics and that seeks to challenge dominant understandings of who does physics and what counts as physics competence Studying gender in physics education research from a perspective of identity and identity construction allows us to understand participation in physics cultures in new ways We are able to see how identities shape and are shaped by inclusion and exclusion in physics practices discourses that dominate physics cultures and actions that maintain or challenge structures of dominance and subordination in physics education The chapters offered in this book focus on understanding identity and its usefulness in various contexts with various learner or practitioner populations This scholarship collectively presents us with a broad picture of the complexity inherent in doing physics and doing gender

Classical Mechanics Govind S. Krishnaswami, 2025-08-31 This well rounded and self contained treatment of classical mechanics strikes a balance between examples concepts phenomena and formalism While addressed to graduate students and their teachers the minimal prerequisites and ground covered should make it useful also to undergraduates and researchers Starting with conceptual context physical principles guide the development Chapters are modular and the presentation is precise yet accessible with numerous remarks footnotes and problems enriching the learning experience Essentials such as Galilean and Newtonian mechanics the Kepler problem Lagrangian and Hamiltonian mechanics oscillations rigid bodies and motion in noninertial frames lead up to discussions of canonical transformations angle action variables Hamilton Jacobi and linear stability theory Bifurcations nonlinear and chaotic dynamics as well as the wave heat and fluid equations receive substantial coverage Techniques from linear algebra differential equations manifolds vector and tensor calculus groups Lie and Poisson algebras and symplectic and Riemannian geometry are gently introduced A dynamical systems viewpoint pervades the presentation A salient feature is that classical mechanics is viewed as part of the wider fabric

Albers,Stephen B. Rodi,Ann E. Watkins,2012-12-06 by Donald J Albers ix INTRODUCTION In July of 1984 the first national conference on mathematics education in two year colleges was held at Menlo College The conference was funded by the Alfred P Sloan Foundation Two year colleges account for more than one third of all undergraduate enrollments in mathematics and more than one half of all college freshmen are enrolled in two year colleges These two facts alone suggest the importance of mathematics education in two year colleges particularly to secondary schools four year colleges and universities For a variety of reasons four year colleges and universities are relatively unaware of two year colleges Arthur Cohen who was a participant at the New Directions conference warns Four year colleges and universities ignore two year colleges at their own peril Ross Taylor another conference participant encouraged two year college faculty to be ever mindful of their main source of students secondary schools and to work hard to strengthen their ties with them There are many other reasons why it was important to examine two year college mathematics from a national perspective 1 Over the last quarter century no other sector of higher education has grown so rapidly as have two year colleges Their enrollments tripled in the 60 s doubled in the 70 s and continue to increase rapidly in the 80 s x 2 Twenty five years ago two year colleges accounted for only one seventh of all undergraduate mathematics enrollments today the fraction is more than one third Indian Science Abstracts ,1995
