Adaptive Techniques for Mixed Signal System on Chip Ayman Fayed, Mohammed Ismail, 2006-09-27 Adaptive Techniques for Mixed Signal System on Chip discusses the concept of adaptation in the context of analog and mixed signal design along with different adaptive architectures used to control any system parameter. The first part of the book gives an overview of the different elements that are normally used in adaptive designs including tunable elements as well as voltage current and time references with an emphasis on the circuit design of specific blocks such as voltage controlled transconductors offset comparators and a novel technique for accurate implementation of on chip resistors. While the first part of the book addresses adaptive techniques at the circuit and block levels the second part discusses adaptive equalization architectures employed to minimize the impact of ISI Intersymbol Interference on the quality of received data in high speed wire line transceivers. It presents the implementation of a 125Mbps transceiver operating over a variable length of Category 5 CAT 5 Ethernet cable as an example of adaptive equalizers.

*Nanobiotechnology in Bioformulations* Ram Prasad, Vivek Kumar, Manoj Kumar, Devendra Choudhary, 2019-07-04 With the recent shift of chemical fertilizers and pesticides to organic agriculture the employment of microbes that perform significant beneficial functions for plants has been highlighted. This book presents timely discussion and coverage on the use of microbial formulations which range from powdered or charcoal based to solution and secondary metabolite based bioformulations. Bioformulation development of biofertilizers and biopesticides coupled with the advantages of nanobiotechnology propose significant applications in the agricultural sector including nanobiosensors nanoherbicides and smart transport systems for the regulated release of agrochemical. Moreover the formulation of secondary metabolites against individual phytopathogens could be used irrespective of geographical positions with higher disease incidences. The prospective advantages and uses of nanobiotechnology generate tremendous interest as it could augment production of agricultural produce while being cost effective both energetically and economically. This bioformulation approach is incomparable to existing technology as the bioformulation would explicitly target the particular pathogen without harming the natural microbiome of the ecosystem. Nanobiotechnology in Bioformulations covers the constraints associated with large scale development and commercialization of bioinoculant formations. Furthermore exclusive emphasis is placed on next generation efficient bioinoculants having secondary metabolite formulations with longer shelf life and advanced competence against several phytopathogens. Valuable chapters deal with bioformulation strategies that use divergent groups of the microbiome and include detailed diagrammatic and pictorial representation. This book will be highly beneficial for both experts and novices in the fields of microbial bioformulation nanotechnology and nano microbiotechnology. It discusses the prevailing status and applications available for microbial researchers and scientists agronomists students environmentalists agriculturists and agribusiness professionals as well as to anyone devoted to sustaining the ecosystem.
