Climate Zones and Biomes

Climate Zones and Biomes

- Climate zones are geographical areas separated by their climate. Similar climates may be found at similar latitudes across the world.
- A **biome** is a large geographic area that is characterized by its plants and animals.

Study Tip

Think of the word "biome" as "bio-home". A biome houses certain types of plants and animals.

Climate Groups

- In the Köppen classification system, climate zones are classified by temperature, precipitation, and the times of the year when precipitation occurs.
- The Köppen classification system recognizes five major types of climate groups: tropical moist climates, dry climates, moist subtropical mid-latitude climates, continental climates, and polar climates.

Climate Group	Temperature	Precipitation	Location	Vegetation
Tropical moist	High average temperatures of at least 18°C (64°F)	Heavy rainfall of at least 150 cm (59 inches) per year	Found within 15°-25° N and S of the equator	Tropical rainforests
Dry	Hot summers and cold winters	Experiences more evaporation than precipitation, irregular rainfall	Found in various locations	Little vegetation
Moist subtropical mid-latitude	Mild summers, great season distinction	There is a lot of rain in this type of climate	Exists along coastal areas	Medium vegetation
Continental	Temperate weather	Winters have lots of storms and snowfall	Found in North America between 40°N and 70°N	There are a lot of trees in these climates
Polar	Winters are extremely cold and dark while summers are cool.	Generally dry, with little precipitation each year	Found in the North Pole, Greenland, and Antarctica	No vegetation

Agriculture, Volume II Eduardo V. Soares, Helena M. V. M. Soares, Spyridon Alexandros Petropoulos, 2024-11-26 The agricultural industry is primarily driven by the fast growth of the population and the subsequent need to supply sufficient food globally. It is estimated that the global population will expand from 8 billion to about 9 billion in 2050 and crop production needs to double in order to supply enough food for all people by 2050. Moreover, the climate change and the intensification of areas of infertile and unproductive soil create new and additional difficulties. It is urgent and of utter importance to find alternative practices to the traditional ones based on the indiscriminate use of various synthetic chemicals, e.g., fertilizers and pesticides, which are mainly used nowadays to overcome current and future agricultural challenges in a natural, more efficient, and sustainable way. Recent regulations, EU 1009/2019 and Farm Bill in EU and USA respectively, promote the adoption of biostimulants in agriculture and open the market for new and innovative solutions. This regulation is a major step forward that should encourage the scientific community in strict interaction with the industry in the continuous development of new bio-based solutions for modern agriculture.
