When using cloud computing, you are using a network of remote servers hosted on the Internet to store, manage, and process data, rather than a local server or personal computer. Cloud computing is the delivery of computing services over the Internet. It allows businesses to use computing resources on an as-needed basis without the need to invest in physical servers and infrastructure. Cloud computing is a model for enabling ubiquitous, convenient, on-demand network access to a shared pool of configurable computing resources that can be rapidly provisioned and released with minimal management effort.
