Empirical Essays on Remote Work and Transparency in Performance Management Felix Bölingen, 2024-07-29 This dissertation consists of four studies that address the impact of two human resource management practices remote work and transparency in performance management on outcomes that are vital to organizations and society at large The first study using a sample of 545 employees examines the conditions under which remote work influences employees work home interface and satisfaction outcomes The second study using data from dual earner couples in Germany adopts a systems perspective understanding employees and their romantic partners as an entangled unit that responds to increased remote work Taken together these studies contribute to a deeper understanding of why employees experiences of remote work are heterogeneous Employees may thrive in remote work arrangements however work coming into the wrong home can increase work home conflict decrease satisfaction and increase loneliness The last two studies contribute to a controversial debate in academia and practice about the extent to which performance management should be transparent Study three presents a theoretical model of performance feedback transparency and tests the

predictions in a laboratory experiment Results show that increased transparency of performance feedback induces both status concerns and a learning focus which predict employee task performance Study four examines the emotion driven performance consequences of miscalibrated pay expectations a potential outcome of insufficient transparency in performance management Three experimental studies caution against miscalibrated bonus payments Taken together the studies provide evidence that performance management can benefit from a more transparent approach but that effective pay and performance communication is a delicate act

The Cognitive, Emotional and Neural Correlates of Creativity Matthijs Baas, Carsten K. W. De Dreu, Bernard A. Nijstad, 2015-08-06 Across species humans have an unsurpassed capacity for creative thought and innovation Human creativity is at the roots of extraordinary achievements in the arts and sciences and enables individuals and their groups to adapt flexibly to changing circumstances to manage complex social relations and to survive and prosper through social technological and medical innovations The ability to generate novel and potentially useful ideas and problem solutions viz creativity is a key driver of human evolution and among the most valued and sought after competencies in contemporary societies that struggle with complex problems and compete for technological and economic supremacy Because creativity provides fitness functionality in both ancestral and contemporary societies it stands to reason that i the human brain evolved to sustain and promote creative thinking and we should be able to identify ii the brain circuitries genetic drivers and neurohormonal modulators of the human capacity for creative problem solving and original ideation and iii the core cognitive and emotional processes underlying creative thought In this Research Topic we bring together a collection of papers to provide an encyclopedic open access snapshot of the current state of the art on the neural cognitive and emotional correlates of creativity
