**Cognitive Neuroscience of Language** David Kemmerer, 2014-11-20 Language is one of our most precious and uniquely human capacities so it is not surprising that research on its neural substrates has been advancing quite rapidly in recent years. Until now, however, there has not been a single introductory textbook that focuses specifically on this topic. *Cognitive Neuroscience of Language* fills that gap by providing an up-to-date, wide-ranging and pedagogically practical survey of the most important developments in the field. It guides students through all of the major areas of investigation, beginning with fundamental aspects of brain structure and function and then proceeding to cover aphasia syndromes, the perception and production of speech, the processing of language in written and signed modalities, the meanings of words and the formulation and comprehension of complex expressions including grammatically inflected words, complete sentences and entire stories. Drawing heavily on prominent theoretical models, the core chapters illustrate how such frameworks are supported and sometimes challenged by experiments employing diverse brain mapping techniques. Although much of the content is inherently challenging and intended primarily for graduate or upper-level undergraduate students, it requires no previous knowledge of either neuroscience or linguistics, defining technical terms and explaining important principles from both disciplines along the way.

*The History of Experience* Wolfgang Leidhold, 2022-10-14 In a wide arc from the Paleolithic to the present day, this book explores the changing structure of human experience and its impact on the dynamics of cultures, civilizations and political ideas. The main thesis is a paradigm shift: the structure of human experience is not a universal constant but changes over time. Looking at the entire range of human history, there are a total of nine transformations, beginning with conscious perception and imagination in the Paleolithic and ending for the time being in modern times with the discovery of the unconscious. In between, this book explores six more transformations that took place in different regions and at different times, which include a sense of order, self-reflection, the eye of reason, spiritual experience as well as the experience of creativity and of consciousness. As such, *The History of Experience* presents both a cross-cultural and comparative theory of experience and cultural dynamics and an exploration of rich materials from East and West. This book is of great use to upper-level undergraduates, postgraduates and scholars interested in the relationship between history, human experience, culture and political order.

**Global Cooperation and the Human Factor in International Relations** Dirk Messner, Silke

Weinlich, 2015-12-14 This book aims to pave the way for a new interdisciplinary approach to global cooperation research. It does so by bringing in disciplines whose insights about human behaviour might provide a crucial yet hitherto neglected foundation for understanding how and under which conditions global cooperation can succeed. As the first profoundly interdisciplinary book dealing with global cooperation, it provides the state of the art on human cooperation in selected disciplines: evolutionary anthropology and biology, decision sciences, social psychology, complex system sciences, written by leading experts. The book argues that scholars in the field of global governance should know and could learn from what other

disciplines tell us about the capabilities and limits of humans to cooperate This new knowledge will generate food for thought and cause creative disturbances allowing us a different interpretation of the obstacles to cooperation observed in world politics today It also offers first accounts of interdisciplinary global cooperation research for instance by exploring the possibilities and consequences of global we identities by describing the basic cooperation mechanism that are valid across disciplines or by bringing an evolutionary perspective to diplomacy This book will be of great interest to scholars and postgraduates in International Relations Global Governance and International Development **Apes and Human**

**Evolution** Russell H. Tuttle, 2014-02-17 Russell Tuttle synthesizes a vast literature in primate evolution and behavior to explain how apes and humans evolved in relation to one another and why humans became a bipedal tool making culture inventing species distinct from other hominoids He refutes the theory that we are sophisticated instinctively aggressive and destructive killer apes **Cognitive Neuroscience** R. E. Passingham, 2016 This Very Short Introduction describes the new field of cognitive neuroscience the study of what happens in the brain when we perceive think reason remember and act Focusing on the human brain Passingham looks at the most recent research in the field the modern brain imaging technologies and what the images can and can't tell us *Handbook of Psychology, History of Psychology*, 2012-10-03

**Exploring the Landscape of the Mind** Stephen S. Clark, 2017-04-19 This book is based on the premise that humankind is first and foremost the outcome of the process of biological evolution Recognition of this is fundamental to our understanding of who we are and how we behave All living things have evolved the physical and

mental attributes that promote their prospects for survival they are good at doing the things that enable them to pass on their genes to succeeding generations and we are no exception Of course through the development of culture we have gained some freedom from our biological origins Nevertheless evolution has constructed the foundation upon which culture is built The first part of the book *Ourselves Interacting with the World* presents an overview of the main capabilities that evolution has endowed us with and that enable us to interact with the environment in advantageous ways This includes our senses which act as windows on the world and also of great importance our emotions and ability to remember Our ability to think is perhaps the crowning achievement of our evolutionary journey and of course we must be able to act in a timely and effective manner The second part of the book *Living Together* traces the history of how we became social creatures To be truly human we had to be capable of sharing and cooperation We also needed to be able to control our aggressiveness and talent for deception We settled down making the transition from hunter gatherers to urban dwellers and agreed upon values and norms of behavior that enhanced our ability to get along Ultimately we came to see good and bad as a morality of right and wrong further augmenting group cohesiveness In the final part of the book *Challenges and Opportunities* attention turns to a consideration of the constraints and possibilities that must be considered in looking to the future These realities can be seen to play out in four social arenas the pursuit of fairness the seeking of justice the interplay of political beliefs and good government and ultimately a united society that is at the same time a true community Our quest for these things will be greatly aided by a deep knowledge and appreciation of our evolutionary past and the indelible imprint it has left upon us It may even lead us to that most elusive of all things happiness
