**Proceedings of the International Conference on Sustainable Collaboration in Business, Technology, Information, and Innovation (SCBTII 2023)** Suhal Kusairi, Forget Mingiri Kapingura, Ratih Hendayani, Nizam Ahmat, 2023-11-17. This is an open access book. Sustainable Collaboration in Business Technology Information and Innovation SCBTII 2023. Preserving the Sustainability of Business in Accelerated Digital Transformation and Transition. Collide. The COVID 19 pandemic had dealt a devastating blow to the SDGs which were already off track before the pandemic forced the closure of schools, government services and workplaces worldwide. The pandemic erased more than four years of progress in eradicating poverty and pushing millions into extreme poverty. On the other hand, digital transformation rapidly creates a world of ever faster technological developments. In response, every business must think of itself as a tech business. Companies need to re-design their processes and ensure their people have the skills needed for a world where we increasingly collaborate and work alongside capable and intelligent machines. Unfortunately, the war in Ukraine has accelerated the schism and confrontation between the major global powers. Another point of tension is the US-China relations joining the trade, technological, economic and geostrategic competition. This year will be more significant. But the world business before us is not divided into two concrete blocks. Instead, a full-scale reconfiguration of alliances is underway which forces all other actors to reposition themselves about the new strategic competition dynamics and to seek out their own spaces in a global transformation. On the other hand, the green and the digital transitions which seemed to work hand in hand towards building a more sustainable world have collided. Against this backdrop, universities as academic institutions play an essential role in educating and providing professional human resources and conducting high-quality research that benefits humanity. However, universities must take a more significant part and be innovative and creative in engaging and supporting the development opportunities and consolidation of the Global community. To embark on this role effectively, universities must always foster communication and discussion among academicians, scholars, practitioners and policymakers under the Sustainability Development Goals (SDGs). Academia, Government, Business and Communities must increasingly cooperate to achieve academic and research excellence and constructive solutions to current business and economic issues. Sustainable Collaboration in Business Information and Innovation SCBTII 2023 is an international conference that brings together academics, professionals, entrepreneurs, researchers, learners and other associated groups from all over the world that is interested in theories as well as practices in the field of the digital economy for global competitiveness. This conference provides opportunities for presenters and

participants to exchange new ideas and experiences create research relationships and find international partners for future collaboration to respond to economy business social and technological development challenges successfully and effectively for better life well being *Eurasian Economic Perspectives* Mehmet Huseyin Bilgin,Hakan Danis,Ender Demir,Uchenna

Yönetim Gazanfer Erbaşlar,     *A Financial Theory of the Business Cycle* Edward W. Fuller, Warren Young, 2025-02-17 A

Financial Theory of the Business Cycle presents a new approach to business cycle theory based on the net present value. The book develops a novel diagrammatic approach to illustrate how fractional reserve banking systematically distorts net present value calculations. In addition to providing fresh insights, the new diagrammatic approach provides a comparative framework that can be used to compare pre-existing theories including those of John Maynard Keynes, Friedrich Hayek, Milton Friedman, and Robert E. Lucas Jr. The net present value is the most important concept in the theory and practice of modern finance. As such, it is the proper framework for explaining the systematic financial losses that occur during the business cycle. Eugen von Böhm-Bawerk and Irving Fisher developed the modern theory of the net present value and the financial theory of the business cycle developed in this book is rooted in their tradition. Although financial elements played a central role in their respective theories, Keynes and Hayek did not use the net present value. This failure created problems that still haunt business cycle theory today. This book addresses these problems and attempts to steer financial theories of the business cycle back to the course set by Böhm-Bawerk and Fisher. In addition to macroeconomists, this book will appeal to financial economists, money and banking experts, accountants, financial analysts, and businesspeople generally.
