Partin, M.D., Louis R. Kavoussi, M.D., Andrew C. Novick, 2008 *Melatonin is not only meant to make you sleep* Rosana Dantas, 2020-02-15 The days the seasons the years pass by Our body can predict and prepare itself for the environmental changes Predictability is very important to optimize its performance However how do our cells know when it is day night summer or winter They need a signal and that's where melatonin comes in It is a hormone produced by a gland in the middle of our brain called pineal gland Pineal gland only produces melatonin at night and in the dark So melatonin is the sign our cells were waiting to tell them it is night It turns out that in the modern world we are overexposed to light People work at night when they should be sleeping Blue light coming from our TV computer or smartphone can block melatonin production Light exposure at night prevents our body to predict properly the environmental

changes so it loses its rhythmicity Disturbances of melatonin rhythms are associated with various health problems such as neurodegenerative diseases heart disease hypertension and even cancer See Melatonin's actions go far beyond making you sleep and that's what I want to tell you in this book *Art - The Path To Knowledge* Luiz Fernando Pereira,2023-03-31 A university must produce and organize knowledge Indeed this fact does not seem to suffer disputes However what is the knowledge that a university produces and disseminates In this short essay which serves as a conceptual basis for a wide ranging epistemological discussion the authors propose questions about knowledge whose answers have been sought by the contemporary academy However the research is more focused on questions than on answers The important thing is to ask the right questions We invite the members of the academic community to participate in this theoretical reflection on knowledge in order to support our research activities extension teaching and graduate studies The growing and unstable transformations the world has been going through are reflected directly in production recording and distribution of knowledge not to mention the value changes that the traditional knowledge has suffered as it is hastily abandoned by unfounded news Revisiting the concepts that form the bases of our science serves to verify their validity effectiveness and socioeconomic political and cultural importance Courage to re-examine openly the beliefs that we embrace in the practice of our sciences is the virtue that defines par excellence the academic researcher If Biology can save the humans and the Earth the arts can save the soul Luiz Fernando Pereira When I examine myself and my methods of thought I come to the conclusion that the gift of fantasy has meant more to me than any talent for abstract positive thinking A Einstein
