PC Magazine ,2005-05 [LDAP System Administration](#) Gerald Carter,2003-03-20 Be more productive and make your life easier That s what LDAP System Administration is all about System administrators often spend a great deal of time managing configuration information located on many different machines usernames passwords printer configurations email client configurations and network filesystem configurations to name a few LDAPv3 provides tools for centralizing all of the configuration information and placing it under your control Rather than maintaining several administrative databases NIS Active Directory Samba and NFS configuration files you can

make changes in only one place and have all your systems immediately see the updated information. Practically platform independent, this book uses the widely available open source OpenLDAP 2 directory server as a premise for examples showing you how to use it to help you manage your configuration information effectively and securely. OpenLDAP 2 ships with most Linux distributions and Mac OS X and can be easily downloaded for most Unix based systems. After introducing the workings of a directory service and the LDAP protocol, all aspects of building and installing OpenLDAP plus key ancillary packages like SASL and OpenSSL, this book discusses Configuration and access control, Distributed directories replication and referral, Using OpenLDAP to replace NIS, Using OpenLDAP to manage email configurations, Using LDAP for abstraction with FTP and HTTP servers, Samba and Radius, Interoperating with different LDAP servers including Active Directory, Programming using Net LDAP. If you want to be a master of your domain, LDAP System Administration will help you get up and running quickly regardless of which LDAP version you use. After reading this book, even with no previous LDAP experience, you will be able to integrate a directory server into essential network services such as mail, DNS, HTTP, and SMB/CIFS.

Implementing LDAP Mark Wilcox, 1999. This book is intended for programmers and system administrators who need to build LDAP clients and install LDAP servers. Issues include the common errors and pitfalls that are inherent in using an LDAP server, particularly the Netscape Directory server.

The ABCs of LDAP Reinhard E. Voglmaier, 2003-11-13. Until now it has been difficult to find the right source of information on LDAP and directory server implementations; books on the subject are overly product specific and a search on the Web results in information overload. *The ABCs of LDAP: How to Install, Run, and Administer LDAP Services* strikes the right balance, providing a synopsis of LDAP fundamentals without getting wrapped up in one particular implementation. This book is for network and systems administrators who want to begin using LDAP more extensively. It delivers the theoretical background needed to understand how these servers work, resulting in clear, concise examples of implementations in both commercial and OpenLDAP environments. The text is structured so that each chapter can stand on its own, with brief descriptions of terms supplemented by references to more detailed explanations in other chapters. You also benefit from a concise overview of how to design a directory, preparing you to execute directory deployments for email, PKI, DNS, NIS servers, and many other productivity enhancing applications. Topics include major LDAP APIs such as PHP, Perl, and Java, as well as distributed command line tools. The book covers ways to integrate LDAP into existing systems and provides hands-on examples within working implementations.

LDAP Authentication for IBM DS8000 Systems: Updated for DS8000 Release 9.1 Bjoern Wesselbaum, Claudio Di Celio, Bert Dufrasne, Connie Riggins, Robert Tondini, Alex Warmuth, IBM Redbooks, 2021-03-08. The IBM DS8000 series includes the option to replace the locally based user ID and password authentication with a centralized directory based approach. This IBM Redpaper publication helps DS8000 storage administrators understand the concepts and benefits of a centralized directory. It provides the information that is required for implementing a DS8000 authentication mechanism that is based on the Lightweight Directory Access

Protocol LDAP Starting with DS8000 Release 9.1 code a simpler native LDAP authentication method is supported along with the former implementation that relies on IBM Copy Services Manager CSM acting as a proxy between the DS8000 and external LDAP servers Note that examples and operations shown in this Redpaper refer to the DS8000 R9.1 SP1 code release bundle 89.11.33.0
