

Final Exam in Econometrics

ECON 837

April 15th, 2015

• **PART 1 [20 POINTS]:** solve both exercises.

Exercise 1 [10]

Consider the linear regression model

$$y_i = x_i' \theta_0 + u_i, \quad i = 1, \dots, n \quad (1)$$

where $x_i \in \mathbb{R}^d$ can be partitioned into 2 subvectors $x_i^{(1)} \in \mathbb{R}^{d_1}$ and $x_i^{(2)} \in \mathbb{R}^{d_2}$ ($d = d_1 + d_2$) with corresponding coefficient vectors $\theta_{0,1}$ and $\theta_{0,2}$. Suppose that the object of principal interest is $\theta_{0,1}$. Suppose that x_i is endogenous and that a vector of mean zero instruments $z_i \in \mathbb{R}^{d_1}$ is available such that $E[z_i u_i] = 0$ and for which also $E[z_i x_i^{(2)'}] = 0$. Assume iid data.

If $d_1 \leq d_2 < d$ then $E[z_i x_i']$ cannot possibly have full column rank because the linear system is underidentified. Moreover, z_i is uncorrelated with the regressors $x_i^{(2)}$.

Show that $\theta_{0,1}$ can nevertheless be consistently estimated by proposing a consistent estimator $\hat{\theta}_1$ of $\theta_{0,1}$ and derive its limit distribution.

Exercise 2 [10]

Questions (a) and (b) are independent.

(a) Let X_1, X_2, \dots, X_n be an iid random sample from a population with mean μ and variance σ^2 . Find an unbiased estimator for μ^2 . Explain your reasoning carefully.

(b) Let X_1, X_2, \dots be a random sequence that converges in probability to a constant a . Assume that $\Pr[X_i > 0] = 1$ for all i . **Without using the Slutsky Theorem**, show that the random sequence Y_1, Y_2, \dots defined by $Y_i = \sqrt{X_i}$ converges in probability to \sqrt{a} .

Econometrics K. Nirmal Ravi Kumar, 2020-05-19 This book harbors an updated and standard material on the various aspects of Econometrics It covers both fundamental and applied aspects and is intended to serve as a basis for a course in Econometrics and attempts at satisfying a need of postgraduate and doctoral students of Economics It is hoped that this book will also be worthwhile to teachers researchers professionals etc Note T F does not sell or distribute the Hardback in India Pakistan Nepal Bhutan Bangladesh and Sri Lanka

Econometric Analysis of Cross Section and Panel Data, second edition Jeffrey M. Wooldridge, 2010-10-01 The second edition of a comprehensive state of the art graduate level text on microeconomic methods substantially revised and updated The second edition of this acclaimed graduate text provides a unified treatment of two methods used in contemporary econometric research cross section and data panel methods By focusing on assumptions that can be given behavioral content the book maintains an appropriate level of rigor while emphasizing intuitive thinking The analysis covers both linear and nonlinear models including models with dynamics and or individual heterogeneity In addition to general estimation frameworks particular methods of moments and maximum likelihood specific linear and nonlinear methods are covered in detail including probit and logit models and their multivariate Tobit models models for count data censored and missing data schemes causal or treatment effects and duration analysis Econometric Analysis of Cross Section and Panel Data was the first graduate econometrics text to focus on microeconomic data structures allowing assumptions to be separated into population and sampling assumptions This second edition has been substantially updated and revised Improvements include a broader class of models for missing data problems more detailed treatment of cluster problems an important topic for empirical researchers expanded discussion of generalized instrumental variables GIV estimation new coverage based on the author's own recent research of inverse probability weighting a more complete framework for estimating treatment effects with panel data and a firmly established link between econometric approaches to nonlinear panel data and the generalized estimating equation literature popular in statistics and other fields New attention is given to explaining when particular econometric methods can be applied the goal is not only to tell readers what does work but why certain obvious procedures do not The numerous included exercises both theoretical and computer based allow the reader to extend methods covered in the text and discover new insights

Econometrics Badi H. Baltagi, 2007-11-21 Here at last is the fourth edition of the textbook that is required reading for economics students as well as those practising applied economics Not only does it teach some of the basic econometric methods and the underlying assumptions behind them but it also includes a simple and concise treatment of more advanced topics from spatial correlation to time series analysis This book's strength lies in its ability to present complex material in a simple yet rigorous manner This superb fourth edition updates identification and estimation methods in the simultaneous equation model It also reviews the problem of weak instrumental variables as well as updating panel data methods

Introductory Econometrics for Finance Chris Brooks, 2008-05-22 This best selling introduction to econometrics is specifically written for finance students The new edition builds on the successful data and problem driven approach of the first edition giving students the skills to estimate and interpret models while developing an intuitive grasp of underlying theoretical concepts

The Refinement of Econometric Estimation and Test Procedures Garry D. A. Phillips, Elias Tzavalis, 2007-02-01 The small sample properties of estimators and tests are frequently too complex to be useful or are unknown Much econometric theory is therefore developed for very large or asymptotic samples where it is assumed that the behaviour of estimators and tests will adequately represent their properties in small samples Refined asymptotic methods adopt an intermediate position by providing improved approximations to small sample behaviour using asymptotic expansions Dedicated to the memory of Michael Magdalinos whose work is a major contribution to this area this book contains chapters directly concerned with refined asymptotic methods In addition there are chapters focusing on new asymptotic results the exploration through simulation of the small sample behaviour of estimators and tests in panel data models and improvements in methodology With contributions from leading econometricians this collection will be essential reading for researchers and graduate students concerned with the use of asymptotic methods in econometric analysis
