## Reporting and Interpreting Liabilities

### ANSWERS TO QUESTIONS

1. Liabilities are probable future sacrifices of economic benefits that arise from past transactions. A current liability is a short-term liability that will be paid in cash (or other current assets) within the current operating cycle or one year, whichever is longer. All other liabilities are defined as long-term liabilities.
2. The balance sheet is the primary source available to external parties for determining the number, type, and amounts of liabilities of a company.
3. Companies typically list obligations to pay suppliers in the near future on their balance sheets as accounts payable.
4. The accounts payable turnover ratio measures how quickly management pays suppliers. It is computed by dividing cost of goods sold for a period by average accounts payable for the period.
5. An accrued liability is an expense that was incurred before the end of the current period but has not been paid. An example is wages incurred during the last few days of the accounting period but not paid to employees because no payroll checks were issued before the end of the accounting period.
6. A note payable is a written promise to pay a stated sum at one or more specified dates in the future. A company must reclassify its long-term debt as a current liability when the debt will be paid with cash (or other current asset) within the next year.
7.  $\$4,000 \times 12\% \times 9/12 = \$360$ .
8. Deferred revenues (also called unearned revenues) reflect cash a company has collected in advance of providing customers goods or services. Because the company owes customers goods or services in the future, deferred revenues are a liability.
9. A contingent liability is a potential liability that has arisen as the result of a past event. Examples of contingent liabilities are lawsuits and warranties. A contingent liability is only reported on the balance sheet if (1) it is probable that the company will incur a future economic sacrifice, and (2) the amount of the sacrifice can be reasonably estimated. If either of these conditions is not met, the contingent liability is typically disclosed in the footnotes. If the future economic sacrifice is judged to be

Robert S. Kaplan, Steven R. Anderson, 2007-02-22 In the classroom ABC looks like a great way to manage a company's resources. But many executives who have tried to implement ABC on a large scale in their organizations have found the approach limiting and frustrating. Why? The employee surveys that companies used to estimate resources required for business activities proved too time consuming, expensive, and irritating to employees. This book shows you how to implement time-driven activity-based costing (TDABC), an easier and more powerful way to implement ABC. You can now estimate directly the resource demands imposed by each business transaction, product, or customer. The payoff? You spend less time and money obtaining and maintaining TDABC data and more time addressing problems that TDABC reveals, such as inefficient processes, unprofitable products and customers, and excess capacity. The authors also show how to use TDABC to link strategic planning to operational budgeting, to enhance the due diligence process for mergers and acquisitions, and to support continuous improvement activities such as lean management and benchmarking. In presenting their model, the authors define the two questions required to build TDABC: 1. How much does it cost per time unit to supply resource capacity for each business process? 2. How much resource capacity time is required to perform work for a company's many transactions, products, and customers? The book demonstrates how to develop simple, valid answers to these two questions. Kaplan and Anderson illustrate the TDABC approach with a wealth of case studies in diverse settings based on actual implementations.
