Wojtecki, 1999-06-18 As industrial processes become more and more automated Air Logic Control ALC becomes increasingly
important As the use of ALC becomes more widespread the need for designers engineers and technicians with a working
knowledge of ALC technology grows significantly Air Logic Control for Automated Systems provides the means for anyone
involved with control systems to acquire the knowledge and skills they need to implement and maintain ALC for automated
manufacturing The author focuses on the two types of ALC most often encountered fluidics and Moving Parts Logic MPL He
provides a thorough background on the subject including the properties of compressible fluids the fundamentals of
pneumatics and the fundamentals of logic systems then delves into both moving parts and non moving parts concepts and
components He discusses signal transmission communications electrical and electronic devices plus the symbology
schematics and flow diagrams related to ALC and offers a complete overview of ALC system design With this background
established the author presents three case studies of increasing complexity a press control system a parts sorting system and
a bottle filling system These studies each offer a different approach to problem solving and together they illustrate the
alternative methods available in practice Air Logic Control for Automated Systems thus offers technicians engineers and
designers the foundation for understanding ALC Armed with this knowledge they are equipped to handle any number of
implementation programming maintenance and troubleshooting tasks with confidence **Frontiers in Robotics Research**
