Food Safety Culture:

Food Safety Culture Frank Yiannas, 2008-12-10 Food safety awareness is at an all time high new and emerging threats to the food supply are being recognized and consumers are eating more and more meals prepared outside of the home Accordingly retail and foodservice establishments as well as food producers at all levels of the food production chain have a growing responsibility to ensure that proper food safety and sanitation practices are followed thereby safeguarding the health of their guests and customers Achieving food safety success in this changing environment requires going beyond traditional training testing and inspectional approaches to managing risks It requires a better understanding of organizational culture and the human dimensions of food safety To improve the food safety performance of a retail or foodservice establishment an organization with thousands of employees or a local community you must change the way people do things You must change their behavior In fact simply put food safety equals behavior When viewed from these lenses one of the most common contributing causes of food borne disease is unsafe behavior such as improper hand washing cross contamination or undercooking food Thus to improve food safety we need to better integrate food science with behavioral science and use a systems based approach to managing food safety risk The importance of organizational culture human behavior and systems thinking is well documented in the occupational safety and health fields However significant contributions to the scientific literature on these topics are noticeably absent in the field of food safety

A Case Study of Food Safety Culture Within a Retailer Corporate

Culture Rodrigo Santibanez-Rivera, 2011 The retail business has been negatively affected due to the increasing customer concerns about food safety and the recent events related to microbiological and chemical contamination of food products such as the melamine in infant formula and the multiple cases of produce pathogen contamination. It has been shown that a scientific based food safety system such as Hazard Analysis and Critical Control Points HACCP help reduce the likelihood of food safety incidents. Nevertheless, companies with these kinds of systems have too experienced public food safety issues. Food safety professionals have created instruments to measure food safety based on lagging indicators such as pathogen presence or food safety incident reduction. Though they have not created metrics based on leading indicators to measure the behavior driven by the culture of employees who handle the food. The employees who handle food are influenced by cultural values and behave in a company based on the company's cultural influence; hence, food safety should also be measured in cultural terms as a leading indicator. In order to measure food safety culture of a retail company and understand differences among groups, the researcher used case study methodology to select a USA based retailer. The researcher described the culture of the retailer as well as the leadership styles. Based on these descriptions, the food safety culture of the company and the employee constructs were defined and piloted for construct validity and construct reliability. Once validated, a food safety culture survey instrument was implemented in the operations area of this retailer. The results showed that the employees agreed or strongly agreed that food safety was part of the corporate culture. One of the factors influencing the food safety culture was service to the customer. The results showed that there were differences in food safety culture across the different groups but with negligible or small effect size. One of the main contributions of this study was the development of a metric to measure food safety culture in the retail industry. It also suggests that besides food safety audit scores and incident reduction, food safety needs to be measured in terms of the corporate culture of the retailer. In an effort to improve food safety around the world, organizations should consider that culture plays an important role.

Retail Food Safety Jeffrey Farber,Jackie Crichton,O. Peter Snyder, Jr.,2014-10-07 Currently there is no one book or textbook that covers all aspects of retail food safety It is becoming apparent that a number of issues relating to retail food safety have come to the forefront in some jurisdictions of late For example a recent USDA risk assessment has pointed out that issues occurring at USA retail appear to be critical in terms of contamination of deli meat As well a large listeriosis outbreak in Quebec pointed to retail cross contamination as a key issue In terms of sanitation a number of advances have been made but these have not all been synthesized together in one chapter with a focus on retail In addition the whole area of private standards and the Global Food Safety Initiative GFSI have come to the forefront of late and these as well will be explored in great detail Other aspects related to the safety of important food commodities such as seafood meat produce and dairy will also be discussed and salient areas addressed

Evaluating and Predicting Maturity of Food Safety Culture in Food Manufacturing Lone Jespersen,2017 Food safety culture might well be the most discussed item in modern food safety As such many offer opinions on what food safety culture is without offering science based arguments and subsequently create more confusion than resolution The research presented seeks to further the conversation through development of a valid and predictable system for evaluating food safety culture in food manufacturing The researcher proposes five dimensions that can help segment the topic of food safety culture These were derived from a comparative analysis of eight existing systems designed to evaluate either organizational culture or food safety culture The dimensions were applied through method triangulation to evaluate maturity of food safety culture in five North American food companies Analysis of the data proved the scale s predictive validity as well as the validity and necessity of assessing social desirability in the food safety context The research concludes with an updated food safety maturity model that provides researchers and practitioners alike with a roadmap to maturing food safety culture along four of the five suggested dimensions Finally the researcher proposes a culture model for defining critical actions between food safety cultural building blocks and calls for more research in quantifying business impact of the maturity of these critical actions
