

Using the Function Generator

This section will briefly describe how to operate the function generator, and some of its features. Figure 1 shows the interface of the signal generator, and Figure 2 shows the functionality of the controls.

Figure 1: The interface of the signal generator.

The signal generators in the labs are capable of providing sine, triangle and square waves at frequencies from 0.5Hz to 5MHz. The frequency of the output signal is displayed on the six digit LED display on the top left of the control panel. To adjust the frequency, first press the frequency decade selection button corresponding to the order of magnitude required. Then secondly use the frequency adjustment knob to tune the generator to the desired frequency.

You can change the function type using the buttons indicated by "Function Type" in Figure 2.

Figure 2: The control panel with the functionality of each control labelled.

There are four smaller knobs used to further adjust the output signal, labelled "DUTY", "CMOS", "OFFSET" and "AMPL". The black text next to these adjustment is applicable when the knobs are in the pushed-in position, and the orange text is applicable when the knobs have been pulled outwards. The
