More information is added to such fields as bionanotechnology, nanorobotics, and bio MEMS, NEMS, bio nanotribology, and bio nanomechanics. The book is organized by an experienced editor with a universal knowledge and written by an international team of over 150 distinguished experts. It addresses mechanical and electrical engineers, materials scientists, physicists, and chemists who work either in the nano area or in a field that is or will be influenced by this new key technology.

Surfactants in Tribology, Volume 4 Girma Biresaw, K.L. Mittal, 2014-11-21

Surface science and tribology play very critical roles in many industries. Manufacture and use of almost all consumer and industrial products rely on the application of advanced surface and tribological knowledge. The fourth in a series, **Surfactants in Tribology, Volume 4** provides an update on research and development activities connecting surfactants.

Tribology in Engineering Hasim Pihtili, 2013-05-08

The main goal in preparing this book was to publish contemporary concepts, new discoveries, and innovative ideas in the field of surface engineering, predominantly for the technical applications as well as in the field of production engineering, and to stress some problems connected with the use of various surface processes in modern manufacturing of different purpose machine parts. This book is an attempt to introduce science into the study of surface treatment processes. Tribology offers a good approach for describing abrasive machining and coating processes and offers the ability to predict some of the outputs of the processes. The study of friction forces and energy explores the importance of the various factors which govern the stresses and deformations of abrasion. The effects of grain shape, depth of penetration, and lubrication on the process forces are explored. The tribology of nanostructured surfaces involves many fundamental and scientific issues. More importantly, it has tremendous applications in industries. It is a powerful tool to regulate friction, adhesion, and wetting of surfaces by altering their geometric textures and material compositions at the nanoscale and hence to control the tribological performance of the engineering surfaces.

Transient Processes in Tribology A.A. Lubrecht, G. Dalmaz, 2004-06-04

The papers contained within this volume focus on the transient aspects of the processes in tribology, highlighting the differences obtained with stationary conditions, be they experimental, analytical, or numerical.
