Advanced Environments, Tools, and Applications for Cluster Computing Dan Grigoras,Alex Nicolau,Bernard Toursel,Bertil Folliot,2003-08-01 Started by small group of well known scientists with the aim of sharing knowledge experiences and results on all aspects of cluster computing the initiative of a workshop on cluster computing received more attention after IFIP WG 10 3 and IEEE Romania Section accepted our request for sponsorship Moreover the application for a NATO ARW grant was successful leading to a greater interest in the workshop In this respect we have to say that we chose Romania in order to attract scientists from Central and Eastern European countries and improve the cooperation in the region in the field of cluster computing We had an extremely short time to organize the event but many people joined us and enthusiastically contributed to the process The success of the workshop is wholly due to the hard work of the organizing committee members of the program committee key speakers speakers from industry and authors of accepted papers The workshop consisted of invited and regular paper presentations followed by discussions on many important current and emerging topics ranging from sheduling and load balancing to grids The key speakers devoted their

time and efforts to presenting the most interesting results of their research groups and we all thank them for this All papers were peer reviewed by two or three reviewers      **Foundations of Computer Software** Radu Calinescu,Ethan Jackson,2011-05-23 This book presents the thoroughly refereed and revised post workshop proceedings of the 16th Monterey Workshop held in Redmond WA USA in March April 2010 The theme of the workshop was Foundations of Computer Software with a special focus on Modeling Development and Verification of Adaptive Systems The 13 revised full papers presented were carefully reviewed and selected from numerous submissions for inclusion in the book The contributions show how the foundations and development techniques of computer software could be adapted even for industrial safety critical and business critical applications to improve dependability and robustness and to ensure information privacy and security

**Foundations and Applications of MIS** Yasuhiko Takahara,Yongmei Liu,2007-10-08 Foundations and Applications of MIS presents a unique systems theory approach to management information system MIS development The development is driven by the need to eliminate ambiguity in specification design and construction of the application software Further the authors show that the considerable effort being expanded nowadays on validation verification and testing as required in current software engineering practices will be reduced The approach also reinforces the belief that MIS development is independent of software development The work presents an approach that provides a theoretical foundation for MIS

development from the systems theoretic viewpoint along with practical applications ranging from a transaction processing system to a solver system Both formal systems theory and automatic system generation based on the authors newly extended Prolog offer a significant increase in the efficiency of specification design and production of the application software as well as an increase in the functional reliability of the software produced The book assumes a working knowledge of elementary set theory logic and familiarity with some systems concepts such as the automaton model *Guide to Training and Development Services* ,1992
