The Biology and Fisheries of the Slipper Lobster Kari L. Lavalli, Ehud Spanier, 2007-01-24 Written by international experts, *The Biology and Fisheries of the Slipper Lobster* provides comprehensive coverage of the known biology, ecology, behavior, physiology, evolutionary history, and genetics of the numerous species in the family Scyllaridae. Earth, Life, and System Bruce Clarke, 2015-07-01 A strikingly original collection of essays which places the work and broad intellectual interests of Lynn Margulis in a variety of contexts. Stacy Alaimo, author of *Exposed: Environmental Politics and Pleasures in Posthuman Times*, exploring the broad implications of evolutionary theorist Lynn Margulis's work, this collection brings together specialists across a range of disciplines from paleontology, molecular biology, evolutionary theory, and geobiology to developmental systems theory, archaeology, history of science, cultural science studies, and literature and science. Addressing the multiple themes that animated Margulis's science, the essays within take up variously astrobiology and the origin of life, ecology and symbiosis from the microbial to the planetary scale, the coupled interactions of earthly environments and evolving life in Gaia theory and earth system science, and the connections of these newer scientific ideas to cultural and creative productions. Altogether *Earth, Life, and System* offers a series of often fascinating, always stimulating, invariably enriching essays in an incisive and unruly science and its existential repercussions. It is a fitting tribute to one of modern science's most generative and productive independent spirits, a gadfly like Socrates whose ultimate concern was to ensure that enquiry and debate were never stifled by received opinion and normal expectations. The British Society for Literature and Science. A vital contribution to interdisciplinary knowledge about life, evolution, and the planetary imaginary. Tyler Volk, award-winning author of *Quarks to Culture*. Contributors include biologists, philosophers, historians, and even Margulis's son, a science writer who sets the tone for the rest of the text in an intimate first chapter about his mother. Clarke's sought-after interdisciplinarity shines in the finished product. Isis Review.

Vivarium Gerd B. Müller, 2017-10-06 The scientific achievements and forgotten legacy of a major Austrian research institute from its founding in 1902 to its wartime destruction in 1945. The Biologische Versuchsanstalt was founded in Vienna

in 1902 with the explicit goal to foster the quantification mathematization and theory formation of the biological sciences Three biologists from affluent Viennese Jewish families Hans Przibram Wilhelm Figdor and Leopold von Portheim founded financed and nurtured the institute overseeing its development into one of the most advanced biological research institutes of the time And yet today its accomplishments are nearly forgotten In 1938 the founders and other members were denied access to the institute by the Nazis and were forced into exile or deported to concentration camps The building itself was destroyed by fire in April 1945 This book rescues the legacy of the Vivarium as the Institute was often called describing both its scientific achievements and its place in history The book covers the Viennese sociocultural context at the time of the Vivarium s founding and the scientific zeitgeist that shaped its investigations It discusses the institute s departments and their research topics and describes two examples that had scientific and international ramifications the early work of Karl von Frisch who in 1973 won the Nobel Prize in Physiology or Medicine and the connection to Cold Spring Harbor Laboratory in New York Contributors Heiner Fangerau Johannes Feichtinger Georg Gaugusch Manfred D Laubichler Cheryl A Logan Gerd B M ller Tania Munz K rin Nickelsen Christian Rei Kate E Sohasky Heiko Stoff Klaus Taschwer

Quantitative Elements of General Biology Ivan Maly, 2021-08-28 This monograph sketches out a broad spectrum of problems from evolution and metabolism to morphogenesis and biogeographical dynamics whose solution has been impacted by mathematical models Each of the selected examples has led to the recognition and set direction to further study of certain fundamental but unintuitive properties of biological systems such as the making and breaking of specific symmetries that underlie morphogenesis Whether they are long established or only recently accepted these models are selected for being thought provoking and illuminating both the achievements and the gaps in our current understanding of the given area of biology The selection of models is also meant to bring to the fore the existing degree of unity in the quantitative approach to diverse general biological questions and in the systems level properties that are discovered across the levels of biological organization It is the thesis of this book that further cultivation of such unity is a way forward as we progress toward a general theory of living matter This is an ideal book for students in the broadest sense of biology who wish to learn from this attempt to present the exemplary models their methodological lessons and the outline of a unified theory of living matter that is now beginning to emerge In addition to a doctoral student preparing for quantitative biology research this reader could also be an interdisciplinary scientist transitioning to biology The latter for example a physicist or an engineer may be comfortable with the mathematical apparatus and prepared to quickly enter the intended area of work but desires a broader foundation in biology from the quantitative perspective

ENC Focus ,2001 *The Molecular Vision of Life* Lily E. Kay, 1993 This fascinating study examines the rise of American molecular biology to disciplinary dominance focusing on the period between 1930 and the elucidation of DNA structure in the mid 1950s Research undertaken during this period with its focus on genetic structure and function endowed scientists with then unprecedented power over life By viewing the new

biology as both a scientific and cultural enterprise Lily E Kay shows that the growth of molecular biology was a result of systematic efforts by key scientists and their sponsors to direct the development of biological research toward a shared vision of science and society She analyzes the motivations and mechanisms empowering this vision by focusing on two key institutions Caltech and its sponsor the Rockefeller Foundation Her study explores a number of vital sometimes controversial topics among them the role of private power centers in shaping scientific agenda and the political dimensions of pure research It also advances a sobering argument the cognitive and social groundwork for genetic engineering and human genome projects was laid by the American architects of molecular biology during these early decades of the project This book will be of interest to molecular biologists historians sociologists and the general reader alike Towards a Semiotic Biology Claus Emmeche,Kalevi Kull,2011 This book presents programmatic texts on biosemiotics written collectively by world leading scholars in the field Deacon Emmeche Favareau Hoffmeyer Kull Marko Pattee Stjernfelt In addition the book includes chapters which focus closely on semiotic case studies Bruni Kotov Maran Neuman Turovski According to the central thesis of biosemiotics sign processes characterise all living systems and the very nature of life and their diverse phenomena can be best explained via the dynamics and typology of sign relations The authors are therefore presenting a deeper view on biological evolution intentionality of organisms the role of communication in the living world and the nature of sign systems all topics which are described in this volume This has important consequences on the methodology and epistemology of biology and study of life phenomena in general which the authors aim to help the reader better understand **Special Focus on the Biology of Aging** Vincent J. and how itself had some impact on the development of the sciences The volume is not limited to the exact sciences of mathematics and physics which are particularly important for the Kantian tradition but also takes into account less recognised disciplines such as biology chemistry technology and psychology It is complemented by contributions that contrast Neo Kantianism with other scientific philosophies of the period in question The Sociology of Norbert Elias Steven Loyal, Stephen Quilley, 2004-03-18 This book provides a comprehensive and accessible introduction to the key aspects of Norbert Elias's work

Epigenetic Landscapes Susan Merrill

Squier,2017-10-26 Devised in the 1940s by the biologist C H Waddington the epigenetic landscape is a metaphor for how gene regulation modulates cellular development As a scientific model it fell out of use in the late 1960s but returned at the beginning of the twenty first century with the advent of big data genomic research because of its utility among scientists across the life sciences to think more creatively about and to discuss genetics In *Epigenetic Landscapes* Susan Merrill Squier follows the model s cultural trail from its first visualization by the artist John Piper to its use beyond science Squier examines three cases in which the metaphor has been imaginatively deployed to illustrate complex systems that link scientific and cultural practices graphic medicine landscape architecture and bioArt Challenging reductive understandings of epigenetics Squier boldly reclaims the broader significance of the epigenetic landscape as a figure at the nexus of art design and science
