Finite Element Method Vinit Mehta,2022-03-30 The Finite Element Method FEM is a numerical method that can be used for the accurate solution of complex engineering problems The finite element technique has been so well established today that it is considered to be one of the best methods for solving a wide variety of practical problems efficiently In addition the method has become one of the active research areas not only for engineers but also for applied mathematicians The main reasons for the popularity of the method in different fields of engineering is that once a general computer program is written it can be used for the solution of a variety of problems simply by changing the input data In order to realize the full potential of the finite element computation special parallel numerical algorithms programming strategies and programming languages are being developed Many finite element programs especially suitable for the personal computer and workstation environment have been developed Finite Element Method Magnetism FEMM is one of the computer software that can be used for the solution of a variety of scientific and engineering problems It contains a library of programs that can be used for the solution of finite element equations The FEMM finite element programs includes tools for the development of the models along with formulation and solution of their mathematical representation Assessing COVID-19 and Other Pandemics and

Epidemics using Computational Modelling and Data Analysis Subhendu Kumar Pani,Sujata Dash,Wellington P. dos Santos,Syed Ahmad Chan Bukhari,Francesco Flammini,2021-12-13 This book comprehensively covers the topic of COVID 19 and other pandemics and epidemics data analytics using computational modelling Biomedical and Health Informatics is an emerging field of research at the intersection of information science computer science and health care The new era of pandemics and epidemics bring tremendous opportunities and challenges due to the plentiful and easily available medical data allowing for further analysis The aim of pandemics and epidemics research is to ensure high quality efficient healthcare

better treatment and quality of life by efficiently analyzing the abundant medical and healthcare data including patient's data, electronic health records (EHRs) and lifestyle. In the past, it was a common requirement to have domain experts for developing models for biomedical or healthcare. However, recent advances in representation learning algorithms allow us to automatically learn the pattern and representation of the given data for the development of such models. Medical Image Mining is a novel research area due to its large amount of medical images that are increasingly generated and stored digitally. These images are mainly in the form of computed tomography (CT), X-ray, nuclear medicine imaging (PET, SPECT), magnetic resonance imaging (MRI) and ultrasound. Patients' biomedical images can be digitized using data mining techniques and may help in answering several important and critical questions related to health care. Image mining in medicine can help to uncover new relationships between data and reveal new and useful information that can be helpful for scientists and biomedical practitioners. Assessing COVID-19 and Other Pandemics and Epidemics using Computational Modelling and Data Analysis will play a vital role in improving human life in response to pandemics and epidemics. The state-of-the-art approaches for data mining-based medical and health-related applications will be of great value to researchers and practitioners working in biomedical health informatics and artificial intelligence.
