**Logic and Computation** Lawrence C. Paulson, 1987 This book is concerned with techniques for formal theorem proving with particular reference to Cambridge LCF Logic for Computable Functions Cambridge LCF is a computer program for reasoning about computation It combines the methods of mathematical logic with domain theory the basis of the denotational approach to specifying the meaning of program statements Cambridge LCF is based on an earlier theorem proving system Edinburgh LCF which introduced a design that gives the user flexibility to use and extend the system A goal of this book is to explain the design which has been adopted in several other systems The book consists of two parts Part I outlines the mathematical preliminaries elementary logic and domain theory and explains them at an intuitive level giving reference to more advanced reading Part II provides sufficient detail to serve as a reference manual for Cambridge LCF It will also be a useful guide for implementors of other programs based on the LCF approach *Current Trends in Hardware Verification and Automated Theorem Proving* Graham Birtwistle, P.A.
