Measure Theory and Nonlinear Evolution Equations Flavia Smarrazzo,Alberto Tesei,2022-04-19 This text on measure theory with applications to partial differential equations covers general measure theory Lebesgue spaces of real valued and vector valued functions different notions of measurability for the latter weak convergence of functions and measures Radon and Young measures capacity A comprehensive discussion of applications to quasilinear parabolic and hyperbolic problems is provided

Functional Analysis Balmohan Vishnu Limaye,1996 This Book Is An Introductory Text Written With Minimal Prerequisites The Plan Is To Impose A Distance Structure On A Linear Space Exploit It Fully And Then Introduce Additional Features Only When One Cannot Get Any Further Without Them The Book Naturally Falls Into Two Parts And Each Of Them Is Developed Independently Of The Other The First Part Deals With Normed Spaces Their Completeness And Continuous Linear Maps On Them Including The Theory Of Compact Operators The Much Shorter Second Part Treats Hilbert Spaces And Leads Upto The Spectral Theorem For Compact Self Adjoint Operators Four Appendices Point Out Areas Of Further Development Emphasis Is On Giving A Number Of Examples To Illustrate Abstract Concepts And On Citing Various Applications Of Results Proved In The Text In Addition To Proving Existence And Uniqueness Of A Solution Its Approximate Construction Is Indicated Problems Of Varying Degrees Of Difficulty Are Given At The End Of Each Section Their Statements Contain The Answers As Well

Riesz Transforms, Hodge-Dirac Operators and Functional Calculus for Multipliers Cédric Arhancet,Christoph Kriegl,2022-05-05 This book on recent research in noncommutative harmonic analysis treats the L_p boundedness of Riesz transforms associated with Markovian semigroups of either Fourier multipliers on non abelian groups or Schur multipliers The detailed study of these objects is then continued with a proof of the boundedness of the holomorphic functional calculus for Hodge Dirac operators thereby answering a question of Junge Mei and Parcet and presenting a new functional analytic approach which makes it possible to further explore the connection with noncommutative geometry These L_p operations are then shown to yield new examples of quantum compact metric spaces and spectral triples The theory described in this book has at its foundation one of the great discoveries in analysis of the twentieth century the continuity of the Hilbert and Riesz transforms on L_p In the works of Lust Piquard 1998 and Junge Mei and Parcet 2018 it became apparent that these L_p operations can be formulated on L_p spaces associated with groups Continuing these lines of research the book provides a self contained introduction to the requisite noncommutative background Covering an active and exciting topic which has numerous connections with recent developments in noncommutative harmonic analysis the book will be of interest both to experts in no commutative L_p spaces and analysts interested in the construction of Riesz transforms and Hodge Dirac operators

Linear Functional Analysis for Scientists and Engineers Balmohan V.

Limaye,2016-06-18 This book provides a concise and meticulous introduction to functional analysis Since the topic draws heavily on the interplay between the algebraic structure of a linear space and the distance structure of a metric space functional analysis is increasingly gaining the attention of not only mathematicians but also scientists and engineers The purpose of the text is to present the basic aspects of functional analysis to this varied audience keeping in mind the considerations of applicability A novelty of this book is the inclusion of a result by Zabreiko which states that every countably subadditive seminorm on a Banach space is continuous Several major theorems in functional analysis are easy consequences of this result The entire book can be used as a textbook for an introductory course in functional analysis without having to make any specific selection from the topics presented here Basic notions in the setting of a metric space are defined in terms of sequences These include total boundedness compactness continuity and uniform continuity Offering concise and to the point treatment of each topic in the framework of a normed space and of an inner product space the book represents a valuable resource for advanced undergraduate students in mathematics and will also appeal to graduate students and faculty in the natural sciences and engineering The book is accessible to anyone who is familiar with linear algebra and real analysis
