*Security, Privacy and Trust in the IoT Environment*

Zaigham Mahmood, 2019-05-30 The Internet of Things IoT is a network of devices and smart things that provides a pervasive environment in which people can interact with both the cyber and physical worlds As the number and variety of connected objects continue to grow and the devices themselves become smarter users expectations in terms of adaptive and self governing digital environments are also on the rise Although this connectivity and the resultant smarter living is highly attractive to general public and profitable for the industry there are also inherent concerns The most challenging of these refer to the privacy and security of data user trust of the digital systems and relevant authentication mechanisms These

aspects call for novel network architectures and middleware platforms based on new communication technologies as well as the adoption of novel context aware management approaches and more efficient tools and devices In this context this book explores central issues of privacy security and trust with regard to the IoT environments as well as technical solutions to help address them The main topics covered include Basic concepts principles and related technologies Security privacy of data and trust issues Mechanisms for security privacy trust and authentication Success indicators performance metrics and future directions This reference text is aimed at supporting a number of potential audiences including Network Specialists

Management DPM 2018 on conjunction with the 23rd European Symposium on Research in Computer Security ESORICS 2018 held in Barcelona Spain in September 2018 From the CBT Workshop 7 full and 8 short papers out of 39 submissions are included The selected papers cover aspects of identity management smart contracts soft and hardforks proof of works and proof of stake as well as on network layer aspects and the application of blockchain technology for secure connect event ticketing The DPM Workshop received 36 submissions from which 11 full and 5 short papers were selected for presentation The papers focus on challenging problems such as translation of high level business goals into system level privacy policies administration of sensitive identifiers data integration and privacy engineering **Ethics, Governance, and Policies in**

**Artificial Intelligence** Luciano Floridi, 2021-11-02 This book offers a synthesis of investigations on the ethics governance and policies affecting the design development and deployment of artificial intelligence AI Each chapter can be read independently but the overall structure of the book provides a complementary and detailed understanding of some of the most pressing issues brought about by AI and digital innovation Given its modular nature it is a text suitable for readers who wish to gain a reliable orientation about the ethics of AI and for experts who wish to know more about specific areas of the current debate **Value Creation with Digital Twins** Linard Dario Barth, 2024-09-20 A digital twin is a digital

representation of a real world counterpart which can receive and provide data to create value within a use case Digital twins create value for users by enabling new and enhanced smart services However ambiguous definitions and terminology coupled with a lack of shared conceptual reference frameworks complicate cross functional discussions and hinder the widespread implementation of digital twins This thesis proposes a new definition and presents two conceptual reference frameworks to systematically depict value creation with digital twins A design science research approach with mixed methods was used to iteratively design and evaluate these artifacts while ensuring scientific rigor practical relevance and usefulness The applied methods within the five research phases include systematic literature research interviews workshops

with academic experts qualitative and quantitative questionnaires workshops with practice experts and an in depth case study in smart waste management The major findings of this research are i the proposal of a new definition of digital twins that reflects a practical understanding by focusing on value creation ii a scientific conceptual reference framework focusing on completeness by distinguishing 81 elements involved in value creation with digital twins iii a second more application oriented conceptual reference framework focusing on the interrelations of the elements essential for the value creation in practice and iv an instantiation of the application oriented framework for the use case of the in depth case study All artifacts are consistent in content and include the following main dimensions which are to be considered when creating value with digital twins data resources internal value creation and external value creation These artifacts contribute to a common understanding of value creation with digital twins in research and practice Furthermore they enable researchers and practitioners to structure their digital twin activities and communicate them to internal and external stakeholders
