## **Gastrointestinal Nematodes Of Sheep And Cattle Biology:**

Gastrointestinal Nematodes of Sheep and Cattle Ian Scott, Ian Sutherland, 2009-11-02 A unique resource for all those interested in the impact of worms on livestock the anthelmintics used to get rid of them and the emerging problem of anthelmintic resistance This book provides an over arching view of past present and suggested future strategies for control of gastrointestinal nematode parasites in sheep and cattle The book begins with descriptions of the biology of gastrointestinal nematodes the harm they cause to the host and their economic impact The main body of the book deals with the control of worms focusing on the use of anthelmintic drenches The relationship between drenching practices and the development of drug resistance is discussed as well as resistance management The authors also break new ground by discussing alternative options for worm control including nutritional interventions biological control breeding for desirable genetics and artificially improving immunity to infection They also offer useful recommendations for program development

**Genetic differences in resistance to gastrointestinal nematodes in different sheep breeds under conditions of natural infection** Ahmed Idris, 2011-08-15 The objectives of the present study were to determine the prevalence of gastrointestinal nematodes GIN in naturally infected lambs of five sheep breeds based on individual faecal egg counts FEC in Germany and to evaluate the predictable influence of birth type age sex and breed of lambs on the excretion of nematode eggs in the faeces Furthermore the use of potential infection indicator traits such as the dag score DS the faecal consistency FCS the body condition BCS and the FAMACHA either separately or combined to detect individually lambs in need for drenching when exposed to natural nematode infections was investigated Additionally the possibility of breeding for resistance against GIN in German sheep breeds directly based on faecal egg counts FEC or indirectly by using DS FCS BCS and FAMACHA was also evaluated Moreover the relationships between the nematode infection with *Haemonchus contortus* and body and organ measurements of lambs were estimated The field trials under natural conditions of nematode infections Chapters II III and IV were carried out on 3 924 lambs of different breeds aged from 3 to 15 months The breeds used were Merinoland ML German Blackhead Mutton GBM Texel TX Rhoeen RH and Merino long wool MLW Data collection took place on various farms The samples were collected once during the grazing seasons in 2006 2007 and 2008 At the time of faecal sample collection the FAMACHA score the BCS the DS and FCS were additionally determined and served as potential infection indicator traits The lambs were not dewormed at least 45 days before the sampling time Sixty three percent of the lambs were infected with GIN The infections were mostly low to moderate and involved different species *Trichostrongylus* spp were the predominant species based on the percentage of larvae in the faecal cultures Only 11 4% of faecal samples were *Eimeria* oocysts free Tapeworm eggs were encountered in 13 2% of all samples The farms affected the prevalence of GIN infections significantly  $P < 0.001$  Significantly higher FECs  $P < 0.001$

**The Biology of Nematodes** Donald L Lee, 2002-01-10 The Biology of Nematodes synthesizes literature on free living plant parasitic and animal parasitic nematodes Topics covered include systematics and phylogeny neuromuscular

physiology locomotion sense organs behavior aging the nematode genome survival strategies immunology structure and organization gametes and fertilization and feeding and metabolism This volume the most authoritative available includes contributions from researchers working on groundbreaking molecular techniques leading to new approaches in the study of nematode worms It provides an important resource for research scientists working in a number of agricultural medical and biological fields
