Bulletin Kansas Geological Survey, 1964 Scientific and Technical Aerospace Reports, 1995 Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database *Optical Cavities for Optical Atomic Clocks, Atom Interferometry and Gravitational-Wave Detection* Miguel Dovalé Álvarez, 2019-08-10 Devised at the beginning of the 20th century by french physicists Charles Fabry and Alfred Perot the Fabry Perot optical cavity is perhaps the most deceptively simple setup in optics and today a key resource in many areas of science and technology This thesis delves deeply into the applications of optical cavities in a variety of contexts from LIGO s 4 km long interferometer arms that are allowing us to observe the universe in a new way by measuring gravitational waves to the atomic clocks used to realise time with unprecedented accuracy which will soon lead to a redefinition of the second and the matterwave interferometers that are enabling us to test and measure gravity in a new scale The work presented accounts for the elegance and versatility of this setup which today underpins much of the progress in the frontier of atomic and gravitational experimental physics

Genetic Screening Sandra R. Pupecki, 2006 Gene tests also called DNA based tests the newest and most sophisticated of the techniques used to test for genetic disorders involve direct examination of the DNA molecule itself Other genetic tests include biochemical tests for such gene products as enzymes and other proteins and for microscopic examination of stained or fluorescent chromosomes Genetic tests are used for several reasons including Carrier screening which involves identifying unaffected individuals who carry one copy of a gene for a disease that requires two copies for the disease to be expressed Preimplantation genetic diagnosis prenatal diagnostic testing new born screening Presymptomatic testing for predicting adult onset disorders such as Huntington s disease Presymptomatic testing for estimating the risk of developing adult onset cancers and Alzheimer s disease Confirmational diagnosis of a symptomatic individual forensic identity testing In gene tests scientists scan a patient s DNA sample for mutated sequences A DNA sample can be obtained from any tissue including blood For some types of gene tests researchers design short pieces of DNA called probes whose sequences are complementary to the mutated sequences These probes will seek their complement among the three billion base pairs of an individual s genome If the mutated sequence is present in the patient s genome the probe will bind to it and flag the mutation Another type of DNA testing involves comparing the sequence of DNA bases in a patient s gene to a normal version of the gene This book gathers important new research in this field **Therapeutic Medicinal Plants** Marta C.T. Duarte, Mahendra Rai, 2015-11-16 Medicinal plants have been used in the prevention diagnosis and elimination of diseases based on the practical experience of thousands of years There is a pressing need to initiate and transform laboratory research into fruitful formulations leading to the development of newer products for the cure of diseases such as AIDS cancer and hepatitis
