**Topics in Discrete Mathematics** Martin Klazar, Jan Kratochvíl, Martin Loeb, Robin Thomas, Pavel Valtr, 2007-05-28 The book offers the readers a collection of high quality papers in selected topics of Discrete Mathematics to celebrate the 60th birthday of Professor Jarik Nešetřil. Leading experts have contributed survey and research papers in the areas of Algebraic Combinatorics, Combinatorial Number Theory, Game theory, Ramsey Theory, Graphs and Hypergraphs, Homomorphisms, Graph Colorings and Graph Embeddings.

**Automata, Languages and Programming** Luca Aceto, Monika Henzinger, Jiri Čižik, 2011-06-27 The two volume set LNCS 6755 and LNCS 6756 constitutes the refereed proceedings of the 38th International Colloquium on Automata Languages and Programming ICALP 2011 held in Zurich, Switzerland in July 2011. The 114 revised full papers, 68 papers for track A, 29 for track B and 17 for track C presented together with 4 invited talks, 3 best student papers and 3 best papers were carefully reviewed and selected from a total of 398 submissions. The papers are grouped in three major tracks: on algorithms, complexity and games; on logic, semantics, automata and theory of programming; as well as on foundations of networked computation, models, algorithms and information management.

**Discrete and Computational Geometry** Boris Aronov, Saugata Basu, Janos Pach, Micha Sharir, 2012-12-06 An impressive collection of original research papers in discrete and computational geometry contributed by many leading researchers in these fields as a tribute to Jacob E. Goodman and Richard Pollack, two of the founding fathers of the area on the occasion of their 23 x 100 birthdays. The topics covered by the 41 papers provide professionals and graduate students with a comprehensive presentation of the state of the art in most aspects of discrete and computational geometry, including geometric algorithms, study of arrangements, geometric graph theory, quantitative and algorithmic real algebraic geometry with important connections to algebraic geometry, convexity, polyhedral combinatorics, the theory of packing, covering and tiling. The book serves as an invaluable source of reference in this discipline.

**Making and Breaking Mathematical Sense** Roi Wagner, 2017-01-10 In line with the emerging field of philosophy of mathematical practice, this book pushes the philosophy of mathematics away from questions about the reality and truth of mathematical entities and statements and toward a focus on what mathematicians actually do and how that evolves and changes over time. How do new mathematical entities come to be? What internal, natural, cognitive and social constraints shape mathematical cultures? How do mathematical signs form and reform their meanings? How can we model the cognitive processes at play in mathematical evolution? And how does mathematics tie together ideas, reality and applications? Roi Wagner uniquely combines philosophical, historical and cognitive studies to paint a fully rounded image of mathematics not as an absolute ideal but as a human endeavor that takes shape in specific social and institutional contexts. The book builds on ancient, medieval and modern case studies to confront philosophical reconstructions and cutting edge cognitive theories. It focuses on the contingent, semiotic and interpretive dimensions of mathematical practice rather than on mathematics' claim to universal or fundamental truths in order to explore

not only what mathematics is but also what it could be Along the way Wagner challenges conventional views that mathematical signs represent fixed ideal entities that mathematical cognition is a rigid transfer of inferences between formal domains and that mathematics exceptional consensus is due to the subject's underlying reality The result is a revisionist account of mathematical philosophy that will interest mathematicians philosophers and historians of science alike
