Flow Modelling and Control in Pipeline Systems Sina Razvarz, Raheleh Jafari, Alexander Gegov, 2020-10-01 This book introduces novel methods for leak and blockage detection in pipelines The leak happens as a result of ageing pipelines or extreme pressure forced by operational error or valve rapid variation Many factors influence blockage formation in pipes like wax deposition that leads to the formation and eventual growth of solid layers and deposition of suspended solid particles in the fluids In this book initially different categories of leak detection are overviewed Afterwards the observability and controllability of pipeline systems are analysed Control variables can be usually presented by pressure and flow rates at the start and end points of the pipe Different cases are considered based on the selection of control variables to model the system Several theorems are presented to test the observability and controllability of the system In this book the leakage flow in the pipelines is studied numerically to find the relationship between leakage flow and pressure difference Removing leakage completely is almost impossible hence the development of a formal systematic leakage control policy is the most reliable approach to reducing leakage rates

Federal Register, 1979-08 **Advanced District Heating and Cooling (DHC) Systems** Robin Wiltshire, 2015-08-31 Advanced District Heating and Cooling DHC Systems presents the latest information on the topic providing valuable information on the distribution of centrally generated heat or cold energy to buildings usually in the form of space heating cooling and hot water As DHC systems are more efficient and less polluting than individual domestic or commercial heating and cooling systems the book provides an introduction to DHC including its potential contribution to reducing carbon dioxide emissions then reviews thermal energy generation for DHC including fossil fuel based technologies those based on renewables and surplus heat valorization Final sections address methods to improve the efficiency of DHC Gives a comprehensive overview of DHC systems and the technologies and energy resources utilized within these systems

Analyzes the various methods used for harnessing energy to apply to DHC systems Ideal resource for those interested in district cooling teleheating heat networks distributed heating thermal energy cogeneration combined heat and power and CHP Reviews the application of DHC systems in the field including both the business model side and the planning needed to implement these systems **Applied Mechanics Reviews** ,1973 Feasibility of LNG as a Fuel for the Mediterranean SSS Fleet Eva Pérez García,Amparo Mestre Alcover,Lorena Sáez Carramolino ,Jorge Lara López,2015-04-20 Forthcoming implementation of international and European environmental regulations namely Marpol Annex VI and Directive 2012 33 EU will force ship owners to assess technologies that can allow them to comply with regulation whilst helping them to improve their position in an increasingly competitive market Given the European economy s fragile condition prevailing uncertainty about its future and about the future evolution of key factors affecting the outcome of the ship owners decisions making the right choice among the multiple feasible technologies available becomes a considerable challenge For the past two years the undersigned team of analysts have worked together in a study leading towards the publication of this report This analysis has been the Fundaci n Valenciaport s contribution to the European Union EU co funded project CO2 and ship transport emission abatement by LNG the COSTA Action The COSTA project has been coordinated by the Italian Ministry of Infrastructure and Transport and co financed by the EU s Trans European Network for Transport TEN T Programme under the Motorways of the Sea Call 2011 Our objective has been to analyse which technology would give the best results for the ship owner to comply with environmental regulations concerning emissions from a financial point of view This has been done for those vessels that are particularly affected by this regulation that is each of the 658 vessels deployed in short sea shipping SSS lines calling at core ports in the Mediterranean and Black Sea EU countries and Portugal Additionally a cost benefit analysis including externalities has been conducted As a result of this study different scenarios on technology uptake towards 2030 for the Southern European SSS fleet have been defined Needless to say there is no certainty of how many of the driving factors will behave in the next 15 years The results published in this report are not definitive predictions of the Mediterranean shipping sector in 2030 Instead our main findings are intended to stimulate discussions about available options for the industry By examining the entire SSS fleet operating in the Mediterranean Black Sea and Portuguese core ports we hope to portray a general picture of the most convenient technological options for different kinds of vessels In addition we hope to draw attention to the factors explaining most of the uncertainty over future results and provide useful information for both ship owners and policy makers who may be evaluating policies to foster the adoption of the technologies that are most environmentally friendly and contribute the most to the competitiveness of the shipping and shipbuilding sectors in Europe Financial feasibility and cost benefit analyses for the conversion of each vessel deployed in short sea services in the studied area have been validated with the collaboration of prominent industrial companies We would like to thank experts working for MAN Diesel and that it helps to stimulate discussion and thinking of the challenges solutions and

potential incentives to be put in place to favour the adoption of the technological options that will foster the competitiveness of the European shipping and shipbuilding industries We sincerely hope you will enjoy reading the following pages
