**Snake Oil Science** R. Barker Bausell PhD, 2009-07-31 Millions of people worldwide swear by such therapies as acupuncture herbal cures and homeopathic remedies Indeed complementary and alternative medicine is embraced by a broad spectrum of society from ordinary people to scientists and physicians to celebrities such as Prince Charles and Oprah Winfrey In the tradition of Michael Shermers *Why People Believe Weird Things* and Robert Parks's *Voodoo Science* Barker Bausell provides an engaging look at the scientific evidence for complementary and alternative medicine CAM and at the logical psychological and physiological pitfalls that lead otherwise intelligent people including researchers physicians and therapists to endorse these cures The book's ultimate goal is to reveal not whether these therapies work as Bausell explains most do work although weakly and temporarily but whether they work for the reasons their proponents believe Indeed as Bausell reveals it is the placebo effect that accounts for most of the positive results He explores this remarkable phenomenon the biological and chemical evidence for the placebo effect how it works in the body and why research on any therapy that does not factor in the placebo effect will inevitably produce false results By contrast as Bausell shows in an impressive survey of research from high quality scientific journals and systematic reviews studies employing credible placebo controls do not indicate positive effects for CAM therapies over and above those attributable to random chance Here is not only an entertaining critique of the strangely zealous world of CAM belief and practice but it also a first rate introduction to how to correctly interpret scientific research of any sort Readers will come away with a solid understanding of good vs bad research practice and a healthy skepticism of claims about the latest miracle cure be it St John's Wort for depression or acupuncture for chronic pain
