Van Trees,Kristine L. Bell,2013-04-15 Originally published in 1968 Harry Van Trees s Detection Estimation and Modulation Theory Part I is one of the great time tested classics in the field of signal processing Highly readable and practically organized it is as imperative today for professionals researchers and students in optimum signal processing as it was over thirty years ago The second edition is a thorough revision and expansion almost doubling the size of the first edition and accounting for the new developments thus making it again the most comprehensive and up to date treatment of the subject With a wide range of applications such as radar sonar communications seismology biomedical engineering and radar astronomy among others the important field of detection and estimation has rarely been given such expert treatment as it is here Each chapter includes section summaries realistic examples and a large number of challenging problems that provide excellent study material This volume which is Part I of a set of four volumes is the most important and widely used textbook and professional reference in the field *Computational and Mathematical Models in Biology* Carla M.A. Pinto,Clara Mihaela Ionescu,2023-12-08 This book provides the most valuable and updated research on computational and mathematical models in biological systems from influential researchers around the world and contributes to the development of future research guidelines in this topic Topics include but are not limited to modeling infectious and dynamic diseases regulation of cell function biological pattern formation biological networks tumor growth and angiogenesis complex biological systems Monte Carlo methods Control theory optimization and their applications *Intelligence at the Edge* Michael Harvey,2020-02-28 Explore powerful SAS analytics and the Internet of Things The world that we live in is more connected than ever before The Internet of Things IoT consists of mechanical and electronic devices connected to one another and to software through the internet Businesses can use the IoT to quickly make intelligent decisions based on massive amounts of data gathered in real time from these connected devices IoT increases productivity lowers operating costs and provides insights into how businesses can serve existing markets and expand into new ones Intelligence at the Edge Using SAS with the Internet of Things is for anyone who wants to learn more about the rapidly changing field of IoT Current practitioners explain how to apply SAS software and analytics to derive business value from the Internet of Things The cornerstone of this endeavor is SAS Event Stream Processing which enables you to process and analyze continuously flowing events in real time With step by step guidance and real world scenarios you will learn how to apply analytics to streaming data Each chapter explores a different aspect of IoT including the analytics life cycle monitoring deployment geofencing machine learning artificial intelligence condition based maintenance computer vision and edge devices *Circuits, Signals, and Speech and Image Processing* Richard C. Dorf,2018-10-03 In two editions spanning more than a

decade The Electrical Engineering Handbook stands as the definitive reference to the multidisciplinary field of electrical engineering Our knowledge continues to grow and so does the Handbook For the third edition it has expanded into a set of six books carefully focused on a specialized area or field of study Each book represents a concise yet definitive collection of key concepts models and equations in its respective domain thoughtfully gathered for convenient access Circuits Signals and Speech and Image Processing presents all of the basic information related to electric circuits and components analysis of circuits the use of the Laplace transform as well as signal speech and image processing using filters and algorithms It also examines emerging areas such as text to speech synthesis real time processing and embedded signal processing Each article includes defining terms references and sources of further information Encompassing the work of the world s foremost experts in their respective specialties Circuits Signals and Speech and Image Processing features the latest developments the broadest scope of coverage and new material on biometrics *Random Signals Estimation and Identification* Nirode Mohanty,2012-12-06 The techniques used for the extraction of information from received or ob served signals are applicable in many diverse areas such as radar sonar communications geophysics remote sensing acoustics meteorology med ical imaging systems and electronics warfare The received signal is usually disturbed by thermal electrical atmospheric channel or intentional inter ferences The received signal cannot be predicted deterministically so that statistical methods are needed to describe the signal In general therefore any received signal is analyzed as a random signal or process The purpose of this book is to provide an elementary introduction to random signal analysis estimation filtering and identification The emphasis of the book is on the computational aspects as well as presentation of com mon analytical tools for systems involving random signals The book covers random processes stationary signals spectral analysis estimation optimiz ation detection spectrum estimation prediction filtering and identification The book is addressed to practicing engineers and scientists It can be used as a text for courses in the areas of random processes estimation theory and system identification by undergraduates and graduate students in engineer ing and science with some background in probability and linear algebra Part of the book has been used by the author while teaching at State University of New York at Buffalo and California State University at Long Beach Some of the algorithms presented in this book have been successfully applied to industrial projects **Lidar Engineering** Gary G. Gimmestad,David W. Roberts,2023-02-23 Explore the spectrum of lidar engineering in this one of a kind introduction For the first time this multidisciplinary resource covers all the scientific and engineering aspects of atmospheric lidar including atmospheric science spectroscopy lasers and eye safety classical optics and electro optics electrical and mechanical engineering and software algorithms in a single comprehensive and authoritative book Discover up to date material not included in any other book including simple treatments of the lidar crossover range and depolarization in lidar signals an improved explanation of lidar data inversion algorithms digital signal processing applications in lidar and statistical limitations of lidar signal to noise ratios This is an ideal standalone text for students seeking a thorough grounding

collected in my monographs published with W de Gruyter recently by providing several new results about the existence and uniqueness of almost periodic type solutions to the abstract Volterra integro differential difference equations which could be solvable or unsolvable with respect to the highest derivative order We would like to particularly emphasize that this is probably the first research monograph devoted to the study of almost periodic type solutions to the abstract Volterra difference equations depending on several variables We also consider here many new important spaces of metrically generalized almost periodic type spaces of sequences and functions and their almost automorphic analogues It is also worth noting that this is probably the first research monograph which concerns the generalized almost periodic type sequences and their applications in a rather detailed manner for the first time in the existing literature we also present here some applications of results from the theory of C regularized solution operator families to the abstract Volterra difference equations Fractional calculus and discrete fractional calculus are rapidly growing fields of theoretical and applied mathematics which are incredibly important in modeling of various real phenomena appearing in different fields like aerodynamics rheology interval valued systems chaotic systems with short memory and image encryption and discrete time recurrent neural networks Many important research results regarding the abstract fractional differential equations and the abstract fractional difference equations in Banach spaces have recently been obtained by a great number of authors from the whole world In this monograph we also contribute to the theories of discrete fractional calculus fractional differential difference equations and multi dimensional Laplace transform Although the monograph is far from being complete we have decided to quote almost eight hundred and fifty research articles which could be of some importance to the interested readers for further developments of the theory established here
