Alexander Kostin, Ljudmila Ilushechkina, 2010-06-28 Introduction to Reliable and Secure Distributed Programming Christian Cachin, Rachid Guerraoui, Luís Rodrigues, 2011-02-11 In modern computing a program is usually distributed among several processes The fundamental challenge when developing reliable and secure distributed programs is to support the cooperation of processes required to execute a common task even when some of these processes fail Failures may range from crashes to adversarial attacks by malicious processes Cachin Guerraoui and Rodrigues present an introductory description of fundamental distributed programming abstractions together with algorithms to implement them in distributed systems where processes are subject to crashes and malicious attacks The authors follow an incremental approach by first introducing basic abstractions in simple distributed environments before moving to more sophisticated abstractions and more challenging environments Each core chapter is devoted to one topic covering reliable broadcast shared memory consensus and extensions of consensus For every topic many exercises and their solutions enhance the understanding This book represents the second edition of Introduction to Reliable Distributed Programming Its scope has been extended to include security against malicious actions by non cooperating processes This important domain has become widely known under the name Byzantine fault tolerance **Building Parallel, Embedded, and Real-Time Applications with Ada** John W.

McCormick, Frank Singhoff, Jérôme Hugues, 2011-04-07 The arrival and popularity of multi core processors has sparked a renewed interest in the development of parallel programs Similarly the availability of low cost microprocessors and sensors has generated a great interest in embedded real time programs This book provides students and programmers whose backgrounds are in traditional sequential programming with the opportunity to expand their capabilities into parallel embedded real time and distributed computing It also addresses the theoretical foundation of real time scheduling analysis focusing on theory that is useful for actual applications Written by award winning educators at a level suitable for undergraduates and beginning graduate students this book is the first truly entry level textbook in the subject Complete examples allow readers to understand the context in which a new concept is used and enable them to build and run the

Agent and Multi-agent Technology for Internet and Enterprise Systems Anne Hakansson, Ronald Hartung, Ngoc Thanh Nguyen, 2010-06-17. Research in multi agent systems offers a promising technology for problems with networks, online trading and negotiations but also social structures and communication. This is a book on agent and multi agent technology for internet and enterprise systems. The book is a pioneer in the combination of the fields and is based on the concept of developing a platform to share ideas and presents research in technology in the field and application to real problems. The chapters range over both applications illustrating the possible uses of agents in an enterprise domain and design and analytic methods needed to provide the solid foundation required for practical systems.

Mastering Cloud Computing Rajkumar Buyya, Christian Vecchiola, S. Thamarai Selvi, 2013-04-05. Mastering Cloud Computing is designed for undergraduate students learning to develop cloud computing applications. Tomorrow's applications won't live on a single computer but will be deployed from and reside on a virtual server accessible anywhere any time. Tomorrow's application developers need to understand the requirements of building apps for these virtual systems including concurrent programming, high performance computing and data intensive systems. The book introduces the principles of distributed and parallel computing underlying cloud architectures and specifically focuses on virtualization, thread programming, task programming and map reduce programming. There are examples demonstrating all of these and more with exercises and labs throughout. Explains how to make design choices and tradeoffs to consider when building applications to run in a virtual cloud environment. Real world case studies include scientific business and energy efficiency considerations.

Expert Systems Research Trends A. R. Tyler, 2007. An expert system also known as a knowledge based system is a computer program that contains some of the subject specific knowledge of one or more human experts. This class of program was first developed by researchers in artificial intelligence during the 1960s and 1970s and applied commercially throughout the 1980s. The most common form of expert systems is a program made up of a set of rules that analyse information usually supplied by the user of the system about a specific class of problems as well as providing mathematical analysis of the problems and depending upon their design recommend a course of user action in order to implement corrections. It is a system that utilises what appear to be reasoning capabilities to reach conclusions. This book presents important research on in this dynamic field.

Real-Time Software Design for Embedded Systems Hassan Gomaa, 2016-05-26. Organized as an introduction followed by several self contained chapters, this tutorial takes the reader from use cases to complete architectures for real time embedded systems using SysML, UML and MARTE and shows how to

apply the COMET RTE design method to real world problems Large-Scale Distributed Computing and Applications: Models and Trends Cristea, Valentin,Dobre, Ciprian,Stratan, Corina,Pop, Florin,Costan, Alexandru,2010-05-31 Many applications follow the distributed computing paradigm in which parts of the application are executed on different network interconnected computers The extension of these applications in terms of number of users or size has led to an unprecedented increase in the scale of the infrastructure that supports them Large Scale Distributed Computing and Applications Models and Trends offers a coherent and realistic image of today s research results in large scale distributed systems explains state of the art technological solutions for the main issues regarding large scale distributed systems and presents the benefits of using large scale distributed systems and the development process of scientific and commercial distributed applications **The Industrial Information Technology Handbook** Richard Zurawski,2018-10-03 The Industrial Information Technology Handbook focuses on existing and emerging industrial applications of IT and on evolving trends that are driven by the needs of companies and by industry led consortia and organizations Emphasizing fast growing areas that have major impacts on industrial automation and enterprise integration the Handbook covers topics such as industrial communication technology sensors and embedded systems The book is organized into two parts Part 1 presents material covering new and quickly evolving aspects of IT Part 2 introduces cutting edge areas of industrial IT The Handbook presents material in the form of tutorials surveys and technology overviews combining fundamentals and advanced issues with articles grouped into sections for a cohesive and comprehensive presentation The text contains 112 contributed reports by industry experts from government companies at the forefront of development and some of the most renowned academic and research institutions worldwide Several of the reports on recent developments actual deployments and trends cover subject matter presented to the public for the first time Structural Failure Models for Fault-Tolerant Distributed Computing Timo Warns,2011-01-28 Timo Warns has developed tractable fault models that while being non probabilistic are accurate for dependent and propagating faults Using seminal problems such as consensus and constructing coterie he demonstrates how the new models can be used to design and evaluate effective and efficient means of fault tolerance

Software-Architekturen für Verteilte Systeme Schahram Dustdar,Harald Gall,Manfred Hauswirth,2013-03-07 **Ein allgemeiner Ansatz zur Metadaten-Verwaltung** Frank Kramer ,2019-01-31 Technologisch ist die Integration einer gro en Menge von heterogenen Benutzern in ein IT System heute problemlos m glich Die Herausforderung besteht darin neue Arten von Zug ngen zu schaffen die unterschiedlichen Nutzergruppen die jeweils f r sie passenden Informationen gleichzeitig bereitstellen Die unerfahrenen Nutzer ben tigen einen Einstieg in das System der sehr schnell einen berblick ber die vorhandenen Daten liefert Normale Nutzer brauchen eine konsolidierte Beschreibung die es ihnen erlaubt bei Bedarf ber ein Drill Down mit den Daten im System zu arbeiten Professionelle Nutzer erhalten eine spezifische und sehr genaue Beschreibung um einen vollst ndigen berblick zu erhalten und die Informationen f r ihre Zwecke zu verarbeiten Metadaten

liefern eine gute Möglichkeit für einen solchen Zugang. Ein geeignetes systematisches Vorgehen zur Beschreibung und Verwaltung von Metadaten ist hierbei im Moment noch nicht existent. In dieser Arbeit soll ein erster Ansatz für eine allgemeine Metadaten Verwaltung geschaffen werden, welche es erlaubt Metadaten zu definieren abzulegen und zu nutzen. Für die Definition wird ein modellbasierter Ansatz verwendet. Für das Modell wird ein allgemeines Metadatenschema konstruiert, das auf Stereotypen basiert. Um die Stereotype zu nutzen wird der Prototyp eines Mediators vorgestellt, der für das Importieren und Exportieren von Metadaten in die Stereotype verwendet werden kann. Zusätzlich werden für das Retrieval von Metadaten automatisiert Strukturen generiert, die zu einem Data Dictionary führen, das dem Konzept in relationalen Datenbankmanagementsystemen ähnelt. Zuletzt wird das Konzept in die Website des deutschen Koordinationsbüros des Internationalen Kontinentalen Tiefbohrprogrammes in Deutschland ICDP integriert.
