Alexander Kostin, Ljudmila Ilushechkina, 2010-06-28 CD ROM with a simulation system and numerous solved models is attached to the book Distributed systems are a continuously expanding area of computer science and computer engineering This book addresses the need for literature on modeling and simulation techniques for distributed systems For simulation modeling of distributed systems in the book a specific class of extended Petri nets is used that allows to easily represent the fundamental processes of any distributed system The book is intended first of all as a text for related graduate level university courses on distributed systems in computer science and computer engineering Other computer science and computer engineering courses would also find the book useful as a source of practical information for a broad community of those graduate students who are busy with simulation in their study and research The book can be useful also to academics who give related graduate courses or deliver research oriented modules for graduate students Further the book can be helpful to system architects and developers who apply modeling and simulation techniques as a step in the design and implementation of their systems Containing a large number of models with commented source texts and simulation results on the attached CD ROM it can also serve as valuable reference book for researchers who want to develop their own models in terms of Petri nets **Introduction to Reliable and Secure Distributed Programming** Christian Cachin, Rachid

Guerraoui, Luís Rodrigues, 2011-02-11 In modern computing a program is usually distributed among several processes The fundamental challenge when developing reliable and secure distributed programs is to support the cooperation of processes required to execute a common task even when some of these processes fail Failures may range from crashes to adversarial attacks by malicious processes Cachin Guerraoui and Rodrigues present an introductory description of fundamental distributed programming abstractions together with algorithms to implement them in distributed systems where processes are subject to crashes and malicious attacks The authors follow an incremental approach by first introducing basic abstractions in simple distributed environments before moving to more sophisticated abstractions and more challenging environments Each core chapter is devoted to one topic covering reliable broadcast shared memory consensus and

extensions of consensus For every topic many exercises and their solutions enhance the understanding This book represents the second edition of Introduction to Reliable Distributed Programming Its scope has been extended to include security against malicious actions by non cooperating processes This important domain has become widely known under the name Byzantine fault tolerance **Software-Architekturen für Verteilte Systeme** Schahram Dustdar,Harald Gall,Manfred Hauswirth,2013-03-07

**Agent and Multi-agent Technology for Internet and Enterprise Systems** Anne Hakansson,Ronald Hartung,Ngoc-Thanh Nguyen,2010-07-14 Research in multi agent systems offers a promising technology for problems with networks online trading and negotiations but also social structures and communication This is a book on agent and multi agent technology for internet and enterprise systems The book is a pioneer in the combination of the fields and is based on the concept of developing a platform to share ideas and presents research in technology in the field and application to real problems The chapters range over both applications illustrating the possible uses of agents in an enterprise domain and design and analytic methods needed to provide the solid foundation required for practical systems

**Novel Algorithms and Techniques in Telecommunications and Networking** Tarek Sobh,Khaled Elleithy,Ausif Mahmood,2010-01-30 Novel Algorithms and Techniques in Telecommunications and Networking includes a set of rigorously reviewed world class manuscripts addressing and detailing state of the art research projects in the areas of Industrial Electronics Technology and Automation Telecommunications and Networking Novel Algorithms and Techniques in Telecommunications and Networking includes selected papers form the conference proceedings of the International Conference on Telecommunications and Networking TeNe 08 which was part of the International Joint Conferences on Computer Information and Systems Sciences and Engineering CISSE 2008 Expert Systems Research Trends A. R. Tyler,2007 An expert system also known as a knowledge based system is a computer program that contains some of the subject specific knowledge of one or more human experts This class of program was first developed by researchers in artificial intelligence during the 1960s and 1970s and applied commercially throughout the 1980s The most common form of expert systems is a program made up of a set of rules that analyse information usually supplied by the user of the system about a specific class of problems as well as providing mathematical analysis of the problem s and depending upon their design recommend a course of user action in order to implement corrections It is a system that utilises what appear to be reasoning capabilities to reach conclusions This book presents important research on in this dynamic field Ein allgemeiner Ansatz zur Metadaten-Verwaltung Frank Kramer ,2019-01-31 Technologisch ist die Integration einer gro en Menge von heterogenen Benutzern in ein IT System heute problemlos m glich Die Herausforderung besteht darin neue Arten von Zug ngen zu schaffen die unterschiedlichen Nutzergruppen die jeweils f r sie passenden Informationen gleichzeitig bereitstellen Die unerfahrenen Nutzer ben tigen einen Einstieg in das System der sehr schnell einen berblick ber die vorhandenen Daten liefert Normale Nutzer brauchen eine konsolidierte Beschreibung die es ihnen erlaubt bei Bedarf ber ein

Drill Down mit den Daten im System zu arbeiten Professionelle Nutzer erhalten eine spezifische und sehr genaue Beschreibung um einen vollständigen Überblick zu erhalten und die Informationen für ihre Zwecke zu verarbeiten Metadaten liefern eine gute Möglichkeit für einen solchen Zugang Ein geeignetes systematisches Vorgehen zur Beschreibung und Verwaltung von Metadaten ist hierbei im Moment noch nicht existent In dieser Arbeit soll ein erster Ansatz für eine allgemeine Metadaten Verwaltung geschaffen werden welche es erlaubt Metadaten zu definieren abzulegen und zu nutzen Für die Definition wird ein modellbasierter Ansatz verwendet Für das Modell wird ein allgemeines Metadatenschema konstruiert das auf Stereotypen basiert Um die Stereotype zu nutzen wird der Prototyp eines Mediators vorgestellt der für das Importieren und Exportieren von Metadaten in die Stereotype verwendet werden kann Zusätzlich werden für das Retrieval von Metadaten automatisiert Strukturen generiert die zu einem Data Dictionary führen das dem Konzept in relationalen Datenbankmanagementsystemen ähnelt Zuletzt wird das Konzept in die Website des deutschen Koordinationsbüros des Internationalen Kontinentalen Tiefbohrprogrammes in Deutschland ICDP integriert
