## 1. What is Blockchain

Blockchain technology is normally associated with cryptocurrencies such as Bitcoin. It is a database of record of transactions which is distributed, and which is validated and maintained by a network of computers around the world. Instead of a single central authority such as a bank, the records are supervised by a large community and no individual person has control over it and no one can go back and change or erase a transaction history. As compared to a conventional centralized database, the information cannot be manipulated due to blockchain's built in distributed nature of structure and confirmed guarantees by the peers. In other words, when a normal centralized database is located on an individual server, blockchain is distributed among the users of a software. Blockchain allows anyone on the network to access everyone else's entries which makes it impossible for one central entity to gain control of the network. Whenever someone performs a transaction, it goes to the network and computer algorithms determine the authenticity of the transaction. Once the transaction is verified, this new transaction is linked with the previous transaction forming a chain of transactions. This chain is called the blockchain.

Blockchain technology is based on decentralized network meaning it operates as a peer to peer network.

One of the most popular blockchain technology is Bitcoin which hosts a digital ledger. Bitcoin provides the platform to mine, store and trade bitcoins via a complex computer algorithm which is tied to a distributed network. Blockchains can be not only used for transactions but it can be considered as registry and inventory for all assets.

## 2. History of Blockchain

In the year 1976, a paper was released on "New Directions in Cryptography" discussed the concept of distributed ledger. With the advancement in the field of Cryptography, another paper entitled as "How to Time-Stamp a Digital Document" by Stuart Haber and Scott Stornetta which laid out the concept to timestamp the data instead of the medium. Another important concept called as "Electronic cash" or "Digital Currency" which came into existence based on a model proposed by David Chaum also contributed towards the development of the concept of Blockchain which was followed by Protocols such as e-cash schemes that introduced double spending detection.

In 1997, Adam Back introduced another concept called "hashcash" which offered a solution to control spam emails. This lead to the concept of creating money called as "bit-money" by Wei Dai based on peer to peer network.

**Blockchain** Hans-Georg Fill, Andreas Meier, 2020-03-14 Sowohl in der Praxis als auch der wissenschaftlichen Forschung ist das Thema Blockchain aktuell von großem Interesse. Noch scheint sich die Technologie am Anfang ihrer Entwicklung zu befinden. Plattformen wie Bitcoin, Ethereum, Hyperledger Fabric, Libra, TradeLens oder andere weisen bereits einen beeindruckenden Reifegrad in ihrer technischen Entwicklung auf. Dennoch befinden sich erst wenige von ihnen bzw. darauf aufbauende Applikationen im produktiven Einsatz bei Unternehmen. Hier können nicht nur Forschende optimal dazu beitragen, neue Ideen zu entwickeln, noch nicht betrachtete Anwendungsfälle und domänen zu untersuchen und erste Prototypen für den konkreten Einsatz zu entwickeln. Die Beiträge der vorliegenden Edition HMD bieten dazu einen umfassenden Überblick und zeigen die große Bandbreite an möglichen Anwendungsfeldern für Blockchains. Das Herausgeberwerk vermittelt somit die Grundlagen zur Blockchain-Technologie.

widmet sich den Smart Contracts und beschreibt wichtige Anwendungsszenarien. Erste Fallbeispiele und rechtliche Aspekte. Wie typisch für die Fachbuchreihe Edition HMD greifen die Beitragsautoren das Thema aus Sicht von Forschung und Praxis gleichermaßen auf. Ein Glossar mit den wichtigsten Begriffen rundet das Buch ab.

**Mathematical Research for Blockchain Economy** Panos Pardalos, Ilias Kotsireas, Yike Guo, William Knottenbelt, 2020-02-13 This book presents the best papers from the 1st International Conference on Mathematical Research for Blockchain Economy (MARBLE 2019) held in Santorini, Greece. While most blockchain conferences and forums are dedicated to business applications, product development or Initial Coin Offering (ICO), launches this conference focused on the mathematics behind blockchain to bridge the gap between practice and theory. Every year thousands of blockchain projects are launched and circulated in the market and there is a tremendous wealth of blockchain applications from finance to healthcare, education, media, logistics and more. However, due to theoretical and technical barriers, most of these applications are impractical for use in a real world business context. The papers in this book reveal the challenges and limitations such as scalability, latency, privacy and security, and showcase solutions and developments to overcome them.

Lucien van Romburg, 2024-11-21 International Banking and Finance Law Series 39 Digital Finance and Regulatory  
Competition Regulating Distributed Ledger Technology Based Financial Products and Services Lucien J van Romburg  
Governments like people compete against each other but do so in a bid to achieve their myriad socio economic and political  
aims In the operation of regulatory competition governments may create rules with the intent of attracting capital and labour  
to their domains In the twenty first century regulatory competition takes on a new dimension in the face of the rapid  
advancement of digital finance The role of financial technology fintech as a tool through which governments achieve their  
aims cannot be overstated The proliferation of distributed ledger technologies DLT marked a watershed moment for  
technological advancement and presented a ripe opportunity for governments to defend their competing claims for resources  
In this context this book tackles the question of whether the world's leading financial centres Hong Kong London and New  
York engaged in regulatory competition against each other through their creation of rules to govern DLT based financial  
products and services during the period 2008 until 2022 In answering this question this book provides a cohesive framework  
for understanding the influence of regulatory competition on rule creation using a narrative lens based on a comparative  
study of legal regulatory and policy instruments The lessons distilled from the analysis provide reasoned observations on the  
potential implications for the future regulation of financial products and services underlined by novel technologies The topics  
covered in this book which concern the timely intersection of regulatory competition and fintech include the emergence and  
impact of DLT its core features types use cases and applications in the financial services industry origins of regulatory  
competition from Charles Tiebout to the regulatory races to the top and bottom formulation of a definitional matrix which  
provides a cohesive framework for understanding regulatory competition regulatory frameworks for DLT based financial  
products and services in Hong Kong London and New York and potential impact of regulatory competition on the future  
regulation of financial products and services underlined by novel technologies This book represents one of the very few  
studies comprehensively tackling the topic of regulatory competition through the guise of fintech It will deepen the  
understanding of lawmakers policymakers and regulators concerning the influence and significance of regulatory  
competition The discussion surrounding the regulation of DLT based financial products and services will also be of interest to  
practitioners students and general readers alike     [Blockchain Radicals](#) Joshua Dávila, 2023-08-08 Blockchain Radicals  
uncovers the radical political potential of the blockchain showing how it can be used by the left in the fight against capitalism  
Over the last decade blockchains and crypto have opened up a new terrain for political action It is not surprising however  
that the crypto space has also become overrun by unscrupulous marketing theft and scams The problem is real but it isn't a  
new one Capitalism has ruined crypto but that shouldn't be the end of it Blockchain Radicals shows us how this has happened  
and how to fix crypto in a way that is understandable for those who have never owned a cryptocurrency as well as those who

are building their own decentralised applications Covering everything from how Bitcoin saved WikiLeaks to decentralised finance worker cooperatives the environmental impact of Bitcoin and NFTs and the crypto commons it shows how these new tools can be used to challenge capitalism and build a better world for all of us While crypto is often thought of as being synonymous with unbridled capitalism Blockchain Radicals shows instead how the technology can and has been used for more radical purposes beyond individual profit and towards collective autonomy
