Henry, P. Kettlewell, 2012-12-06 Cereal uses range from human food and beverages to animal feeds and industrial products It is human food and beverages which are the predominant uses covered in this book since the nutritional quality of cereals for animal feed is described in other publications on animal nutrition and industrial products are a relatively minor use of cereals Cereals are the main

components of human diets and are crucial to human survival Three species wheat rice and maize account for the bulk of human food Barley is the major raw material for beer production and ranks fourth in world production Other species such as sorghum are regionally important This book covers all the major cereal species wheat rice maize barley sorghum millet oats rye and triticale Specific chapters have been devoted to a description of the major end uses of each of the species and to definition of the qualities required for each of their end uses The functional and nutritional quality of cereals determines their suitability for specific purposes and may limit the quality of the end product influencing greatly the commercial value of grain An understanding of the factors that determine grain quality is thus important in the maintenance of efficient and sustainable agricultural and food production The biochemical constituents of the grain that determine quality have been described in chapters on proteins carbohydrates and other components An understanding of the relationships between grain composition and quality is important in selecting grain for specific uses
