Abstract

The integration of Information and Communication Technology (ICT) in rural areas holds significant potential for facilitating active participation of villagers in spatial governance processes. While previous research has primarily focused on the role of e-participation tools in rural governance, there exists a knowledge gap regarding substantive villager participation within intricate systems. This study explores the intricate mechanism of meaningful engagement by harnessing the potential of ICT and parametric technologies. First, the concept of 'e-participation ecosystem' is proposed. The concept integrates ICT, parametric technology and other relevant elements necessary to facilitate substantial participation of rural villagers in spatial governance. Subsequently, an analytical framework to examine the impact mechanism of ICT technology on the efficiency of village spatial governance is developed, building upon an evaluation of villagers' active involvement. Finally, a practical demonstration was conducted in C village to validate the positive impact of ICT on rural spatial governance. This study reveals that the successful implementation of ICT in
