Discrete-time Control Problems Using MATLAB and the Control System Toolbox Joe H. Chow, Dean K. Frederick, Nicholas W. Chbat, 2003 Using the power of MATLAB and its Control System Toolbox this book is the ideal supplement for a digital control systems course Students are able to use a digital computer to rapidly work a wide range of numerical problems and gain deeper insight in control design The book is built around illustrative examples that demonstrate the steps involved in the analysis and design process The examples are followed by a variety of problems that span the spectrum from follow up what if problems to simple textbook type reinforcement problems to open ended exploratory problems and to realistic comprehensive problems This book is part of the Bookware Companion Series American Book Publishing Record ,2003

Feedback Control Problems Dean K. Frederick, Joe H. Chow, 2000 This book is the first complete text in the BookWare Companion Series TM to thoroughly integrate the use of the MATLAB computing environment into the standard sequence of courses taken by electrical engineering majors Use of this text makes it possible to focus on the problems being solved rather than on the programming necessary to obtain a solution The authors utilize a computer biased approach in which computer solutions and theory are viewed as mutually reinforcing rather than as an either or proposition Additionally they adhere to the axiom that one learns by doing rather than by listening this text features more than 100 examples 200 exercises and 250 MATLAB scripts that directly support the authors flexible treatment of discrete and continuous time This Updated Printing revises the book and code examples available for downloading from the Brooks Cole Web Site to MATLAB V5
