Stulen, 2008-12-17 Gain a Unique and Comprehensive Understanding of Ultrasonics. Despite its importance, most books on ultrasonics cover only very specific sub-fields of the science. They generally also take a more mathematical approach and lack the wider scope needed to truly improve understanding and facilitate practical use of ultrasonics across a wide range of disciplines. **Blast Protection of Civil Infrastructures and Vehicles Using Composites** Nasim Uddin, 2010-03-12 With the upsurge in terrorism in recent years and the possibility of accidental blast threats, there is growing interest in manufacturing blast-hardened structures and retrofitting blast mitigation materials to existing structures. Composites provide the ideal material for blast protection as they can be engineered to give different levels of protection by varying the reinforcements and matrices. Part one discusses general technical issues with chapters on topics such as blast threats and types of blast damage, processing polymer matrix composites for blast protection, standards and specifications for composite blast protection materials, high energy absorbing composite materials for blast-resistant design, modelling the blast response of hybrid laminated composite plates and the response of composite panels to blast wave pressure loadings. Part two reviews applications including ceramic matrix composites for ballistic protection of vehicles and personnel using composites to protect military vehicles from mine blasts, blast protection of buildings using FRP matrix composites, using composites in blast-resistant walls for offshore, naval and defence-related structures, using composites to improve the blast resistance of columns in buildings, retrofitting using fibre-reinforced polymer composites for blast protection of buildings and retrofitting to improve the blast response of concrete masonry walls. With its distinguished editor and team of expert contributors, Blast protection of civil infrastructures and vehicles using composites is a standard reference for all those concerned with protecting structures from the effects of blasts in both the civil and military sectors. Reviews the role of composites in blast protection with an examination of technical issues, applications of composites and ceramic matrix composites. Presents numerical examples of simplified blast load computation and an overview of the basics of high explosives, including important properties and physical forms. Varying applications of composites for protection are explored, including military and non-military vehicles and increased resistance in building columns and masonry walls. Structural Health Monitoring 2006 Alfredo Güemes, 2006 These proceedings of the Third European Workshop on Structural Health Monitoring held at the Conference Centre in Granada, Spain, in July of 2006, includes four keynote presentations and 170 technical papers written by an international group of contributors. Papers discuss technology and activities related to damage detection and evaluation in engineering. **Predictive Modeling of Dynamic Processes** Stefan Hiermaier, 2009-07-09 Predictive

Modeling of Dynamic Processes provides an overview of hydrocode technology applicable to a variety of industries and areas of engineering design. Covering automotive crash, blast impact, and hypervelocity impact phenomena, this volume offers readers an in-depth explanation of the fundamental code components. Chapters include informative introductions to each topic and explain the specific requirements pertaining to each predictive hydrocode. Successfully blending crash simulation, hydrocode technology, and impact engineering, this volume fills a gap in the current competing literature available.
